CS 309
Assignment 1

1   Introduction

Your first task is to install Linux on your system. We are going to use Fedora Linux, which is a recent branch of Red Hat Linux. There are several ways to do a Linux install, but we are going to take the easy path. In the lab there are several copies of the Fedora Core 1 install set which is also known as FC1. The install set is comprised of 3 CD's.

If you want to create your own install set of CD's the process is documented in the install set create documentation.

The install process is documented in there in the install docs.
