

# CS 409

## Assignment 1

### Done By: January 21

## 1 Introduction

Your first task is to install Linux on your system. We are going to use Fedora Linux, which is a recent branch of Red Hat Linux. There are several ways to do a Linux install, but we are going to take the easy path. In the lab there are several copies of the Fedora Core 1 install set which is also known as FC1. The install set is comprised of 3 CD's.

If you want to create your own install set of CD's the process is documented in the [install set create documentation](#).

The install process is documented in there in the [install docs](#).
