

Heads up, there will be a quiz of material to date in Lab.

By the end of Lab on 2/11, you should have done the following:

- Completed and turned in quiz you took in Lab on 2/11

- Completed any other assignments to date

And done the following:

- Take your favorite blog concept and go into production.

- Create a blog with that name (if available) or an alternate name.

- Select a template or create your own.

- Fill out your profile.

- Add an image of your choice at the top which represents the blog.

- Post your first post - a synopsis or more detailed justification (your creative brief in real-world terms) of why you should have a blog.

I would encourage you to 'edit html' and play with the code.

It's pretty self-explanatory and is good learning experience.

For example, try to remove the border from the image.

Recap: Create blog, choose template, fill out profile, add image, post your first post.

Have this blog available for review by the Teaching Assistants.

This is a good opportunity to work with the TAs to learn to edit your code while using every available moment of lab time.
