The Library is hiring an 8-hr/week student research assistant to help develop an index for research datasets that have been published by MSU researchers (kind of like Google Dataset Search or DataMed, but focused only on datasets from MSU researchers). The job description is available here: http://www.lib.montana.edu/about/jobs/untitled.html

The software development work is somewhat complex, so we're hoping to hire a student who is a junior, senior, or graduate student. The student will mainly be supervised by Jim Espeland. Jim is the Library's lead Software Developer, and he is a fantastic teacher and mentor.

In alignment with our Library values of diversity, equity, and inclusion, we strongly encourage applications from women and those who identify with traditionally underrepresented or marginalized populations.
