CAD STUDENTS WANTED!

Storytelling Project

The Storytelling team is looking for help…

The MSU research project, which is funded by NSF, focuses on a software program called Alice, which allows users to drag and drop characters and objects into a virtual world and then animate stories with an intuitive coding language. By developing lesson plans that incorporate Alice into curricula related to both computing and American Indian culture, the researchers seek to help Montana educators meet requirements laid out in a Montana law called Indian Education for All while also increasing recruitment of American Indian students into computer science.

How do I apply?

Send Cover Letter and CV to: storytelling@montana.edu
