Student Programmers
Angling Oral History Collection
MSU Library

The Special Collections and Archival Informatics department (SCAI) of the MSU Library is looking for student programmers for work with the Angling Oral History Collection. This is an opportunity to rethink and redesign the oral history collection using emerging technologies and modern UX design methods. Specific duties include: text mining and data analysis, data visualization, front-end development (HTML, CSS, Javascript), and other tasks as assigned. Hours are flexible. Interested students should reach out to project director, James Thull, at jjthull@montana.edu with an expression of interest and short resume.
