**Programmer needed**

We are in need of a programmer to help with the continued development and debugging of a television broadcast automation system. The system was about 7 years old and was written using C++, QT, and Mysql. It was recently converted. It was recently updated to QT5 from QT3. The programmer that started the conversion is no longer working on the project. The operating system is Linux and the distribution is Leap 42 (Suse). We are also in need of a programmer to do some website maintenance. Wages are negotiable. Please contact Sargent Communications, Inc. at 406.679.0527.
