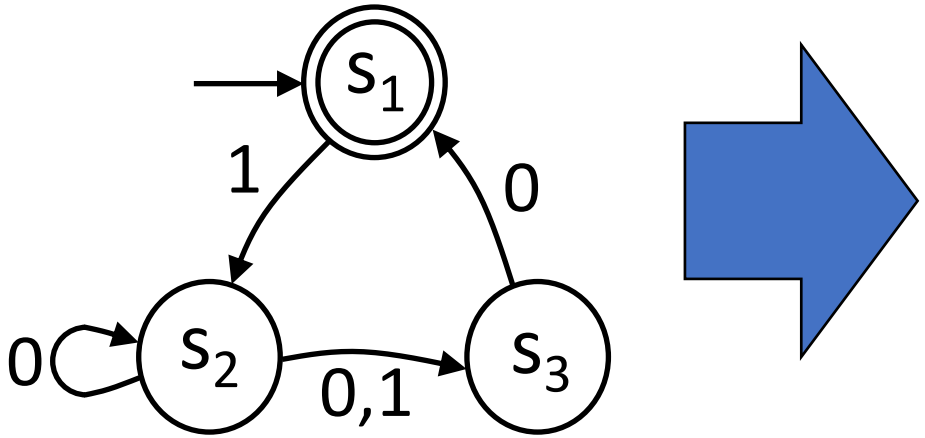
NFA/DFA Equivalence

CSCI 338

DFA vs NFA

NFA



DFA

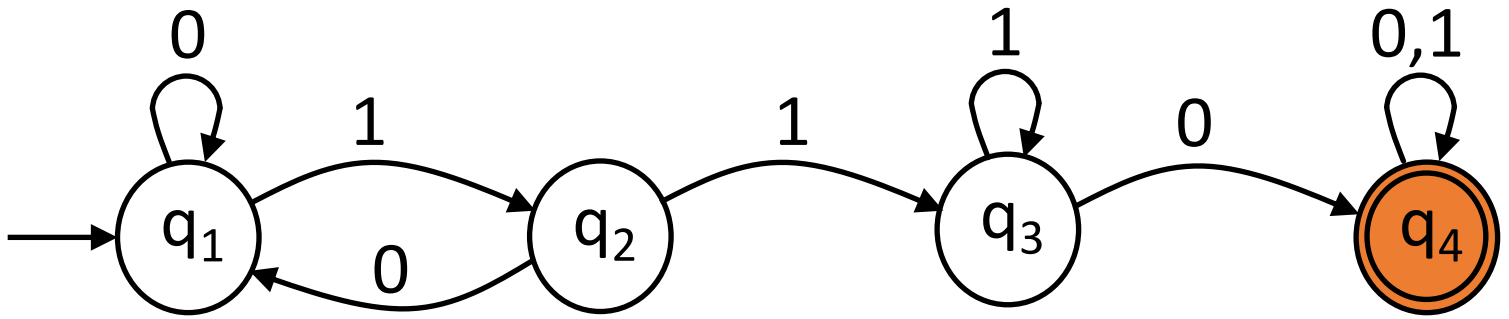
DFA vs NFA

Claim: Every NFA has an equivalent DFA.

Proof Approach:

How did we keep track of our location in a DFA?

$q_1 \xrightarrow{1} q_2 \xrightarrow{1} q_3 \xrightarrow{1} q_3 \xrightarrow{\mathbf{0}} q_4$



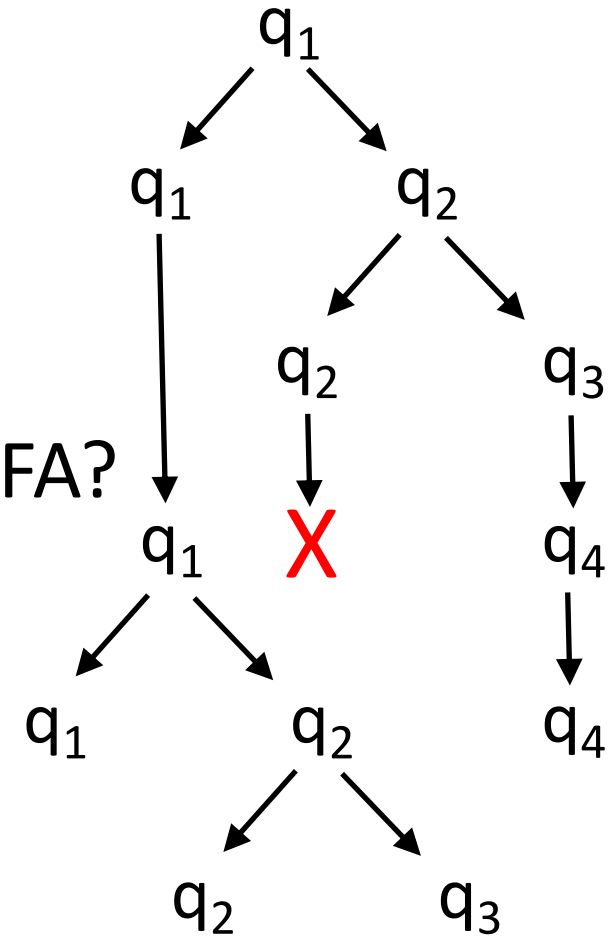
$\omega = 111\mathbf{0}$

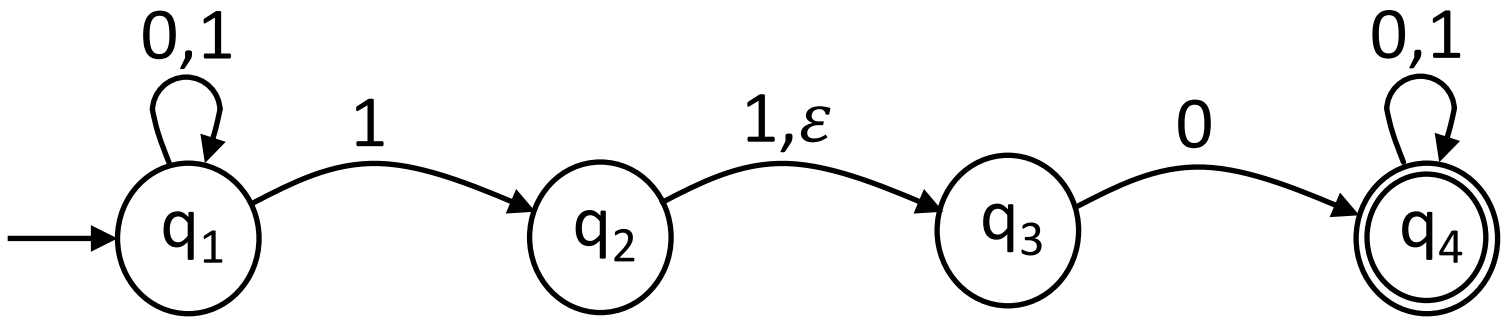
DFA vs NFA

Claim: Every NFA has an equivalent DFA.

Proof Approach:

How did we keep track of our location in an NFA?

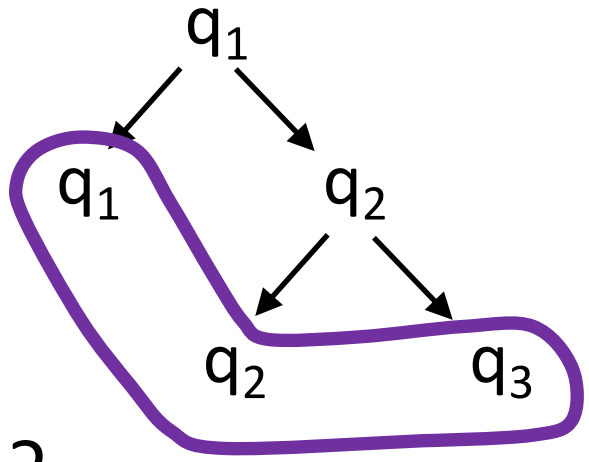




$\omega = 101$

DFA vs NFA

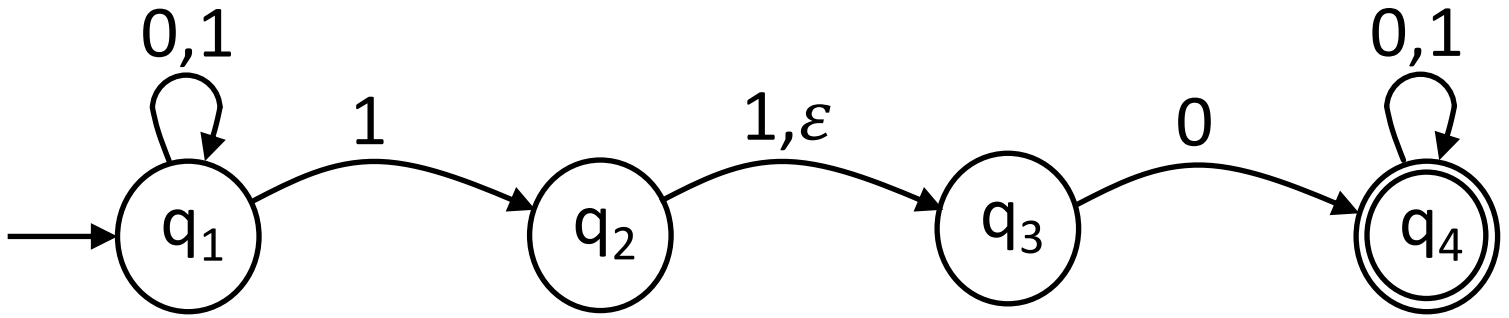
Claim: Every NFA has an equivalent DFA.



Proof Approach:

How did we keep track of our location in an NFA?

Set of all states we could possibly be in.



$\omega = 101$

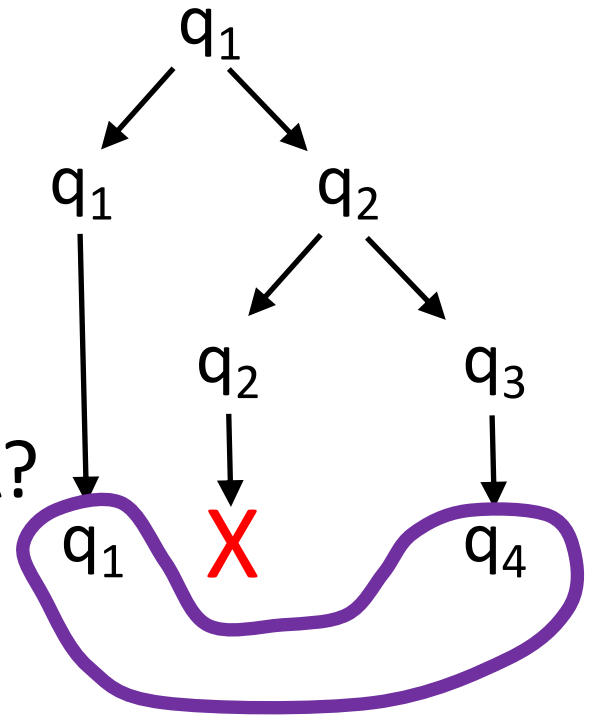
DFA vs NFA

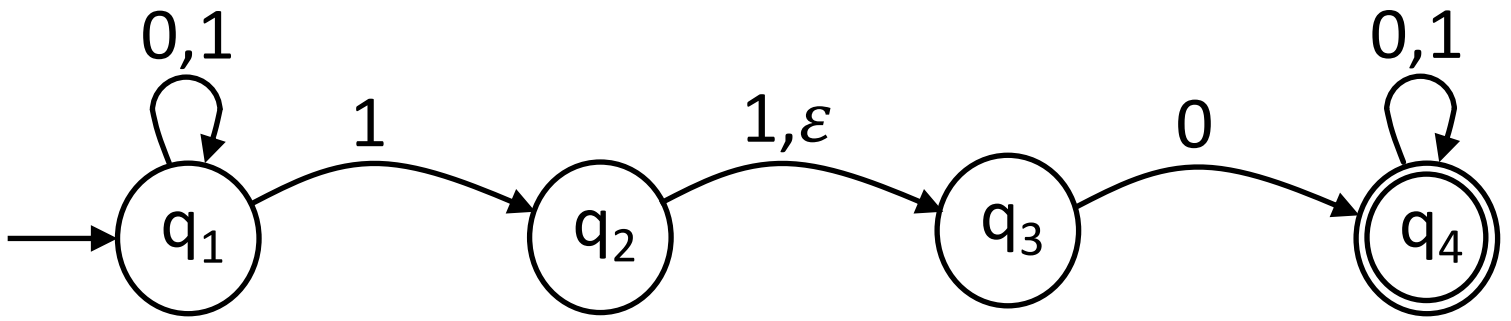
Claim: Every NFA has an equivalent DFA.

Proof Approach:

How did we keep track of our location in an NFA?

Set of all states we could possibly be in.





$\omega = 101$

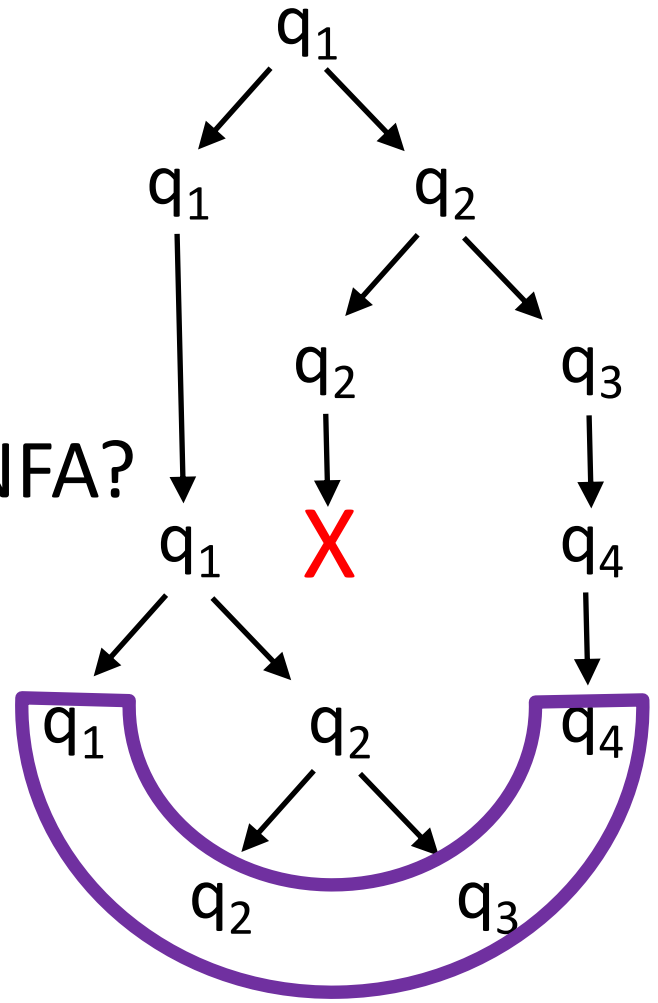
DFA vs NFA

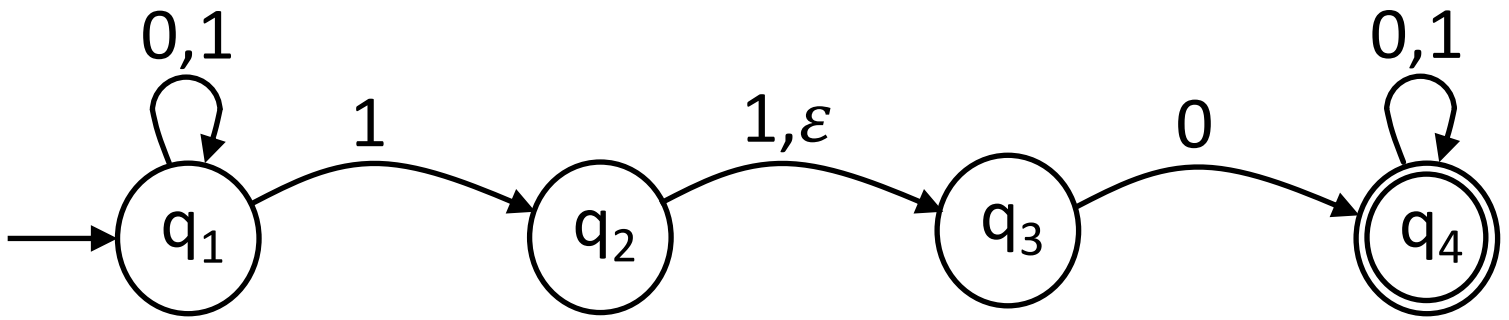
Claim: Every NFA has an equivalent DFA.

Proof Approach:

How did we keep track of our location in an NFA?

Set of all states we could possibly be in.





$\omega = 101$

DFA vs NFA

Claim: Every NFA has an equivalent DFA.

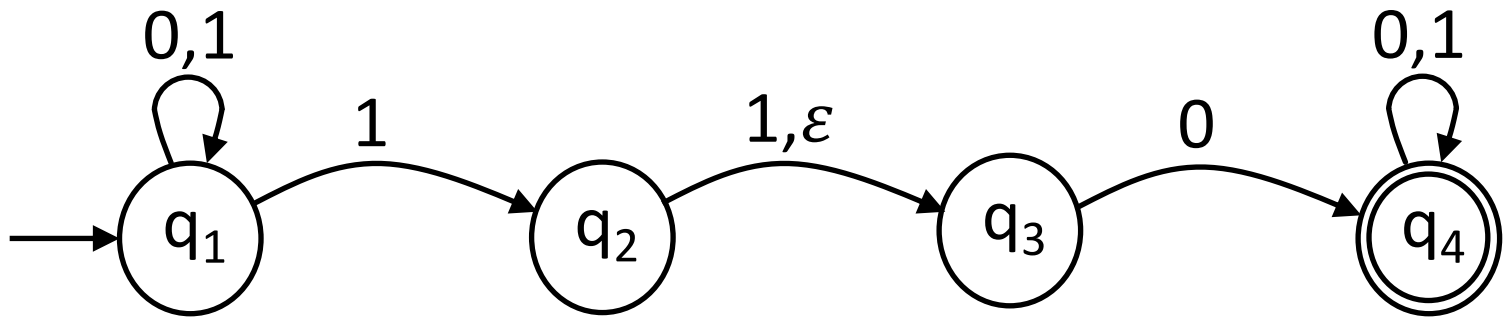
Proof Approach:

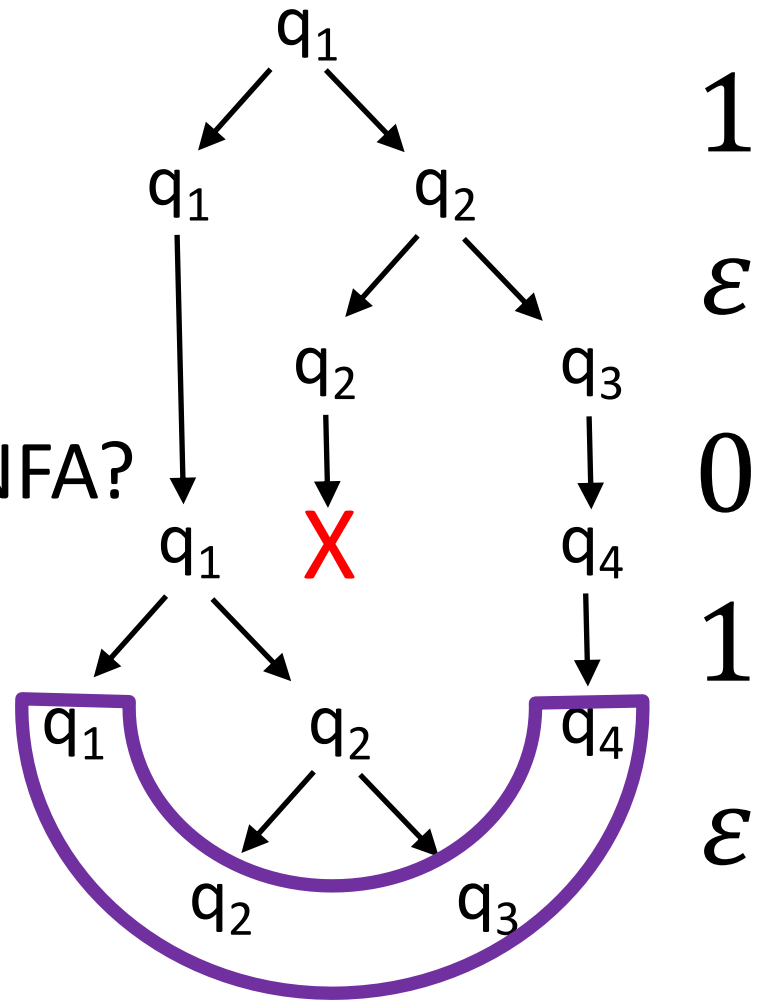
How did we keep track of our location in an NFA?

Set of all states we could possibly be in.

What is the set of all possible locations?

Power set of states! (set of all subsets)

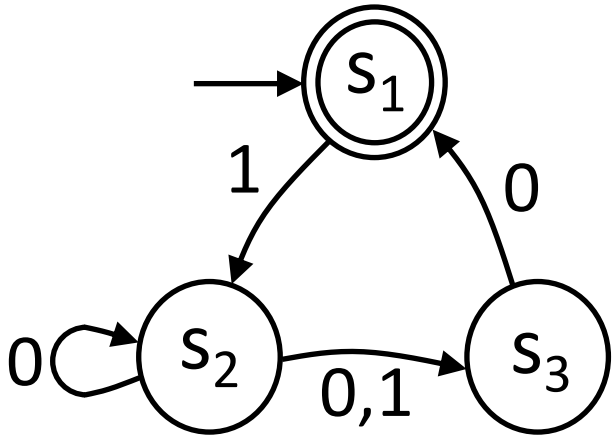




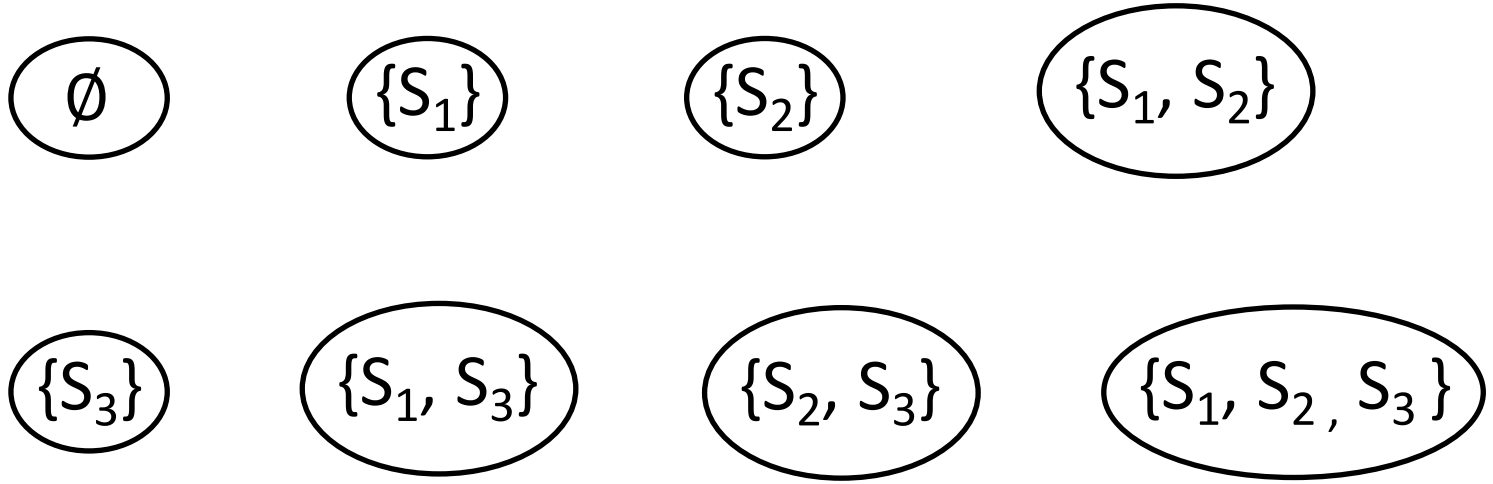
$\omega = 101$

DFA vs NFA

NFA



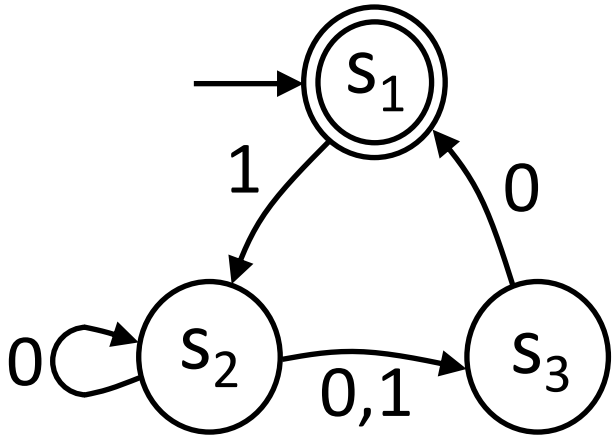
DFA



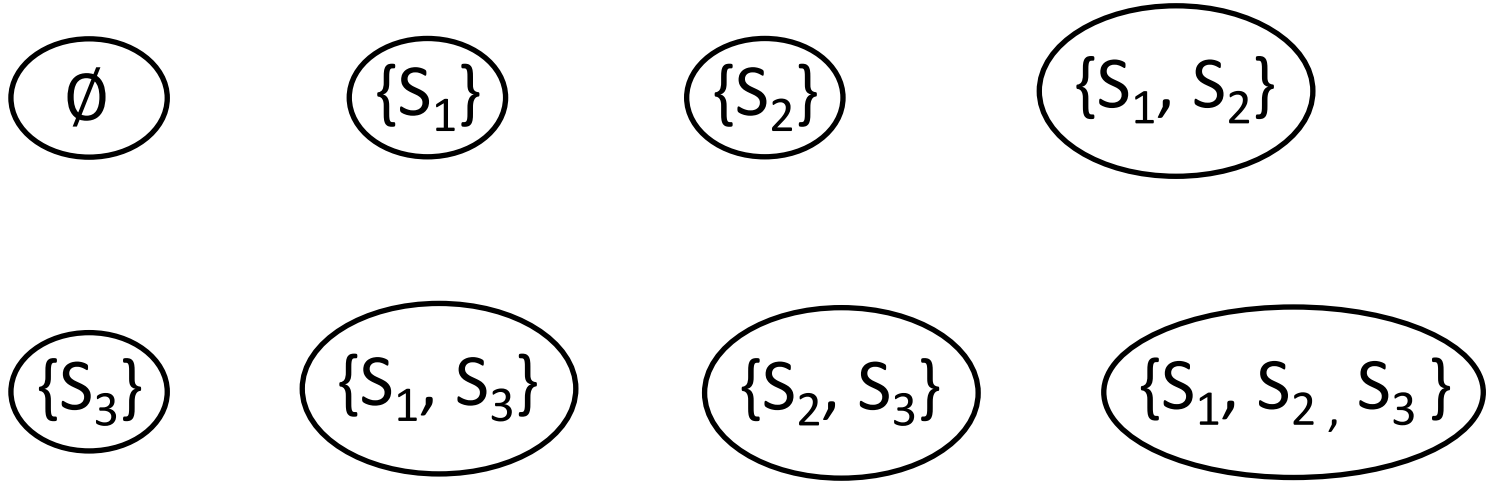
DFA states = Power set of NFA states.

DFA vs NFA

NFA



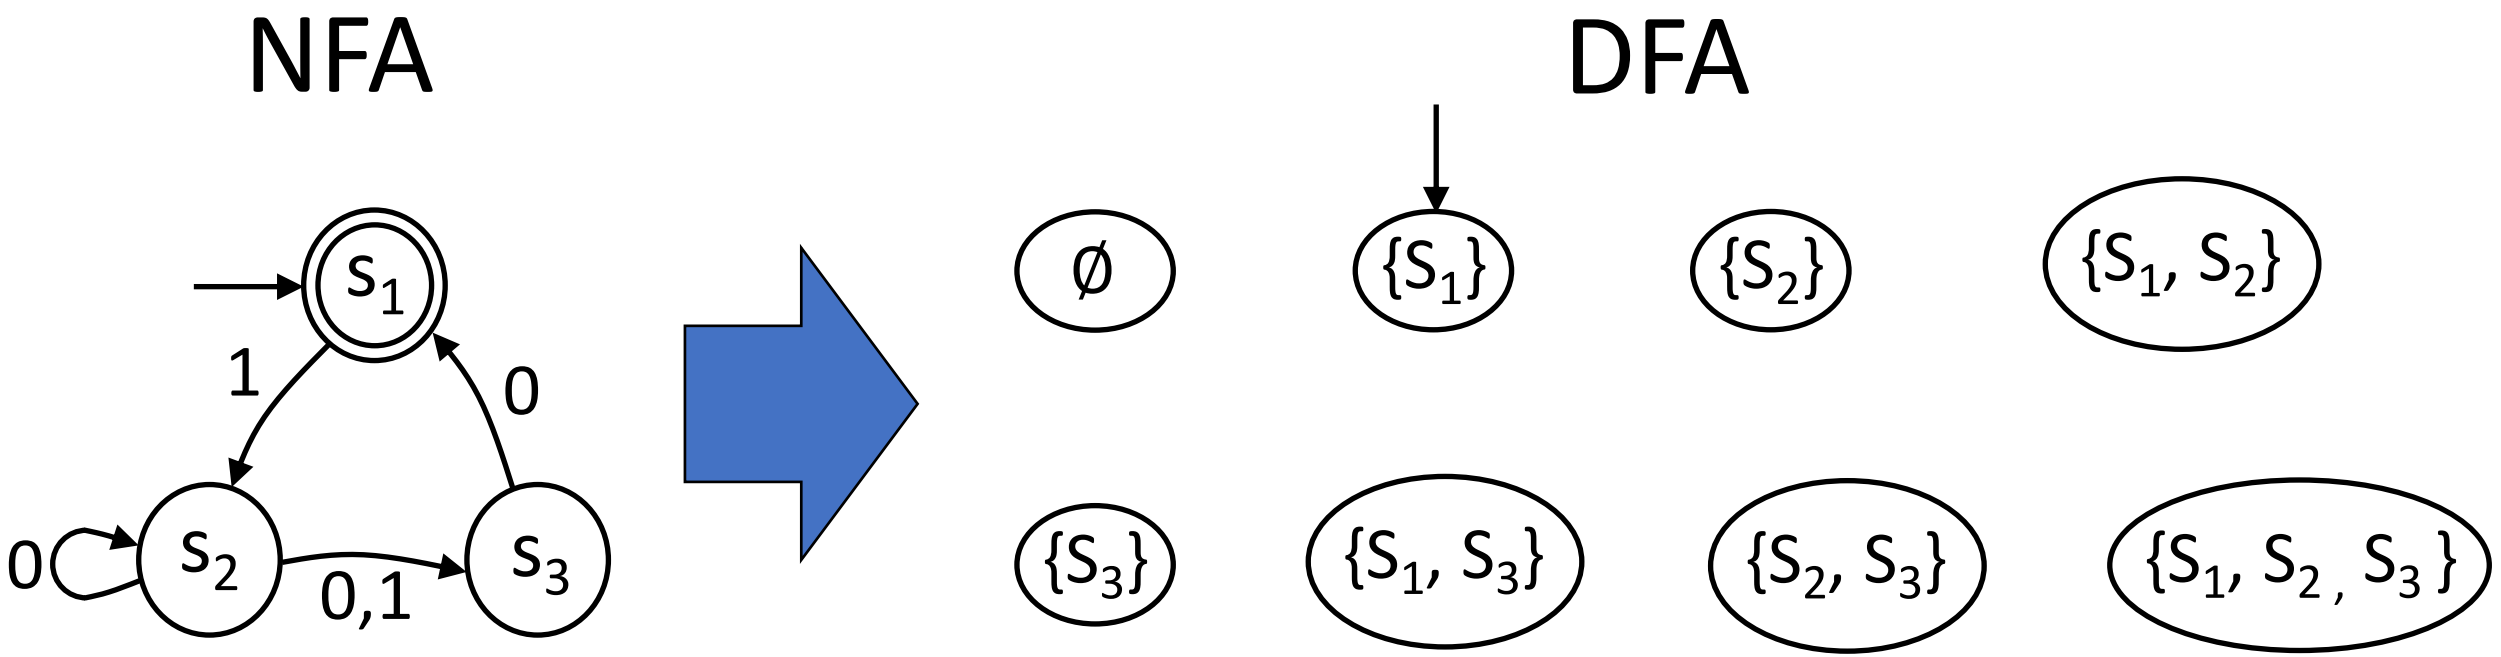
DFA



DFA states = Power set of NFA states.

Start state = ?

DFA vs NFA

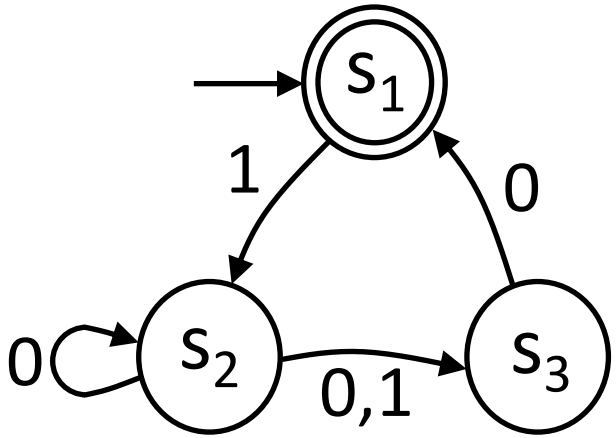


DFA states = Power set of NFA states.

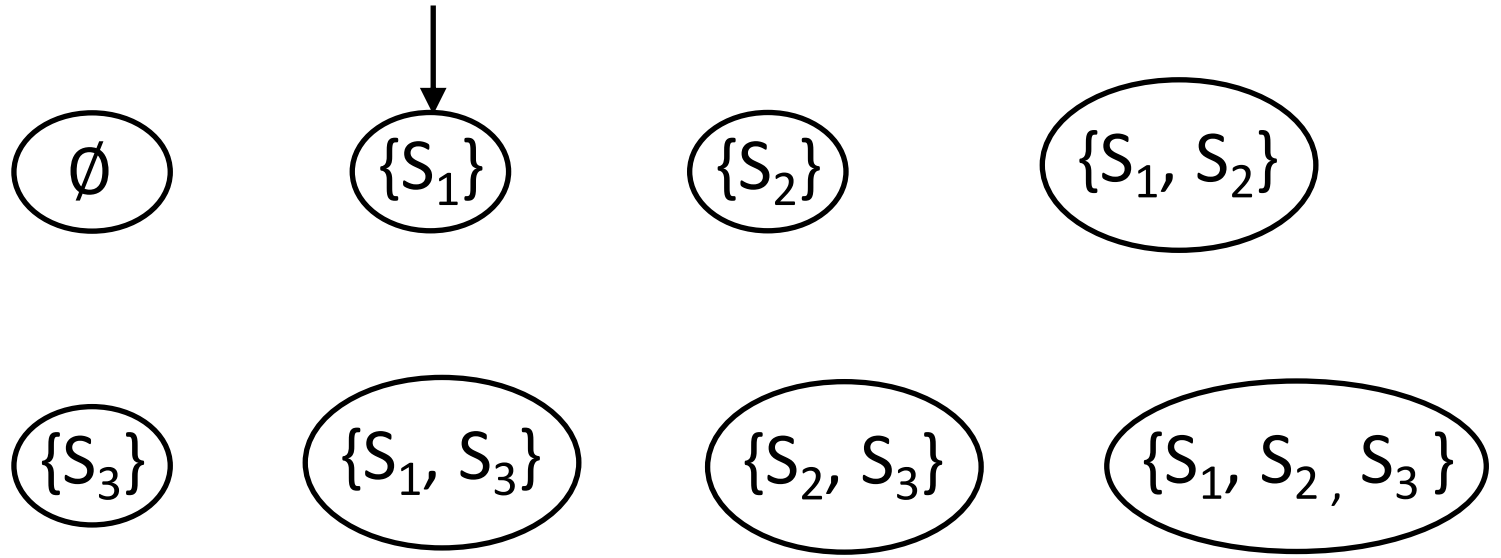
Start state = NFA's start state.

DFA vs NFA

NFA



DFA

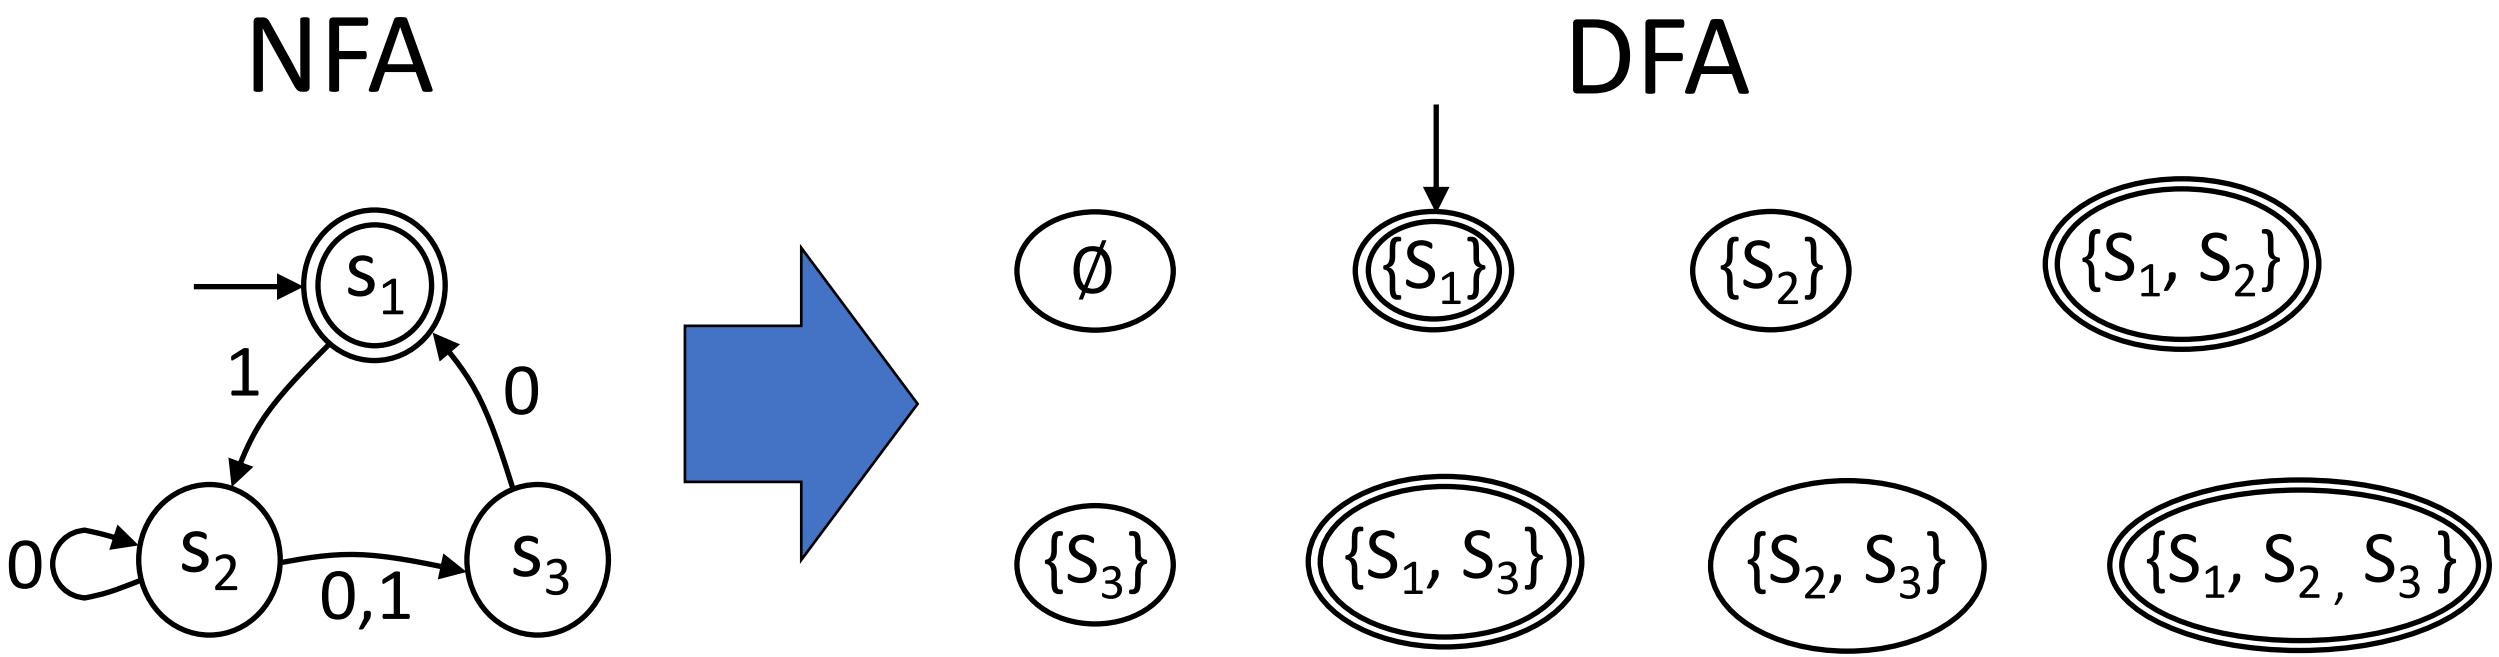


DFA states = Power set of NFA states.

Start state = NFA's start state.

Accept states = ?

DFA vs NFA

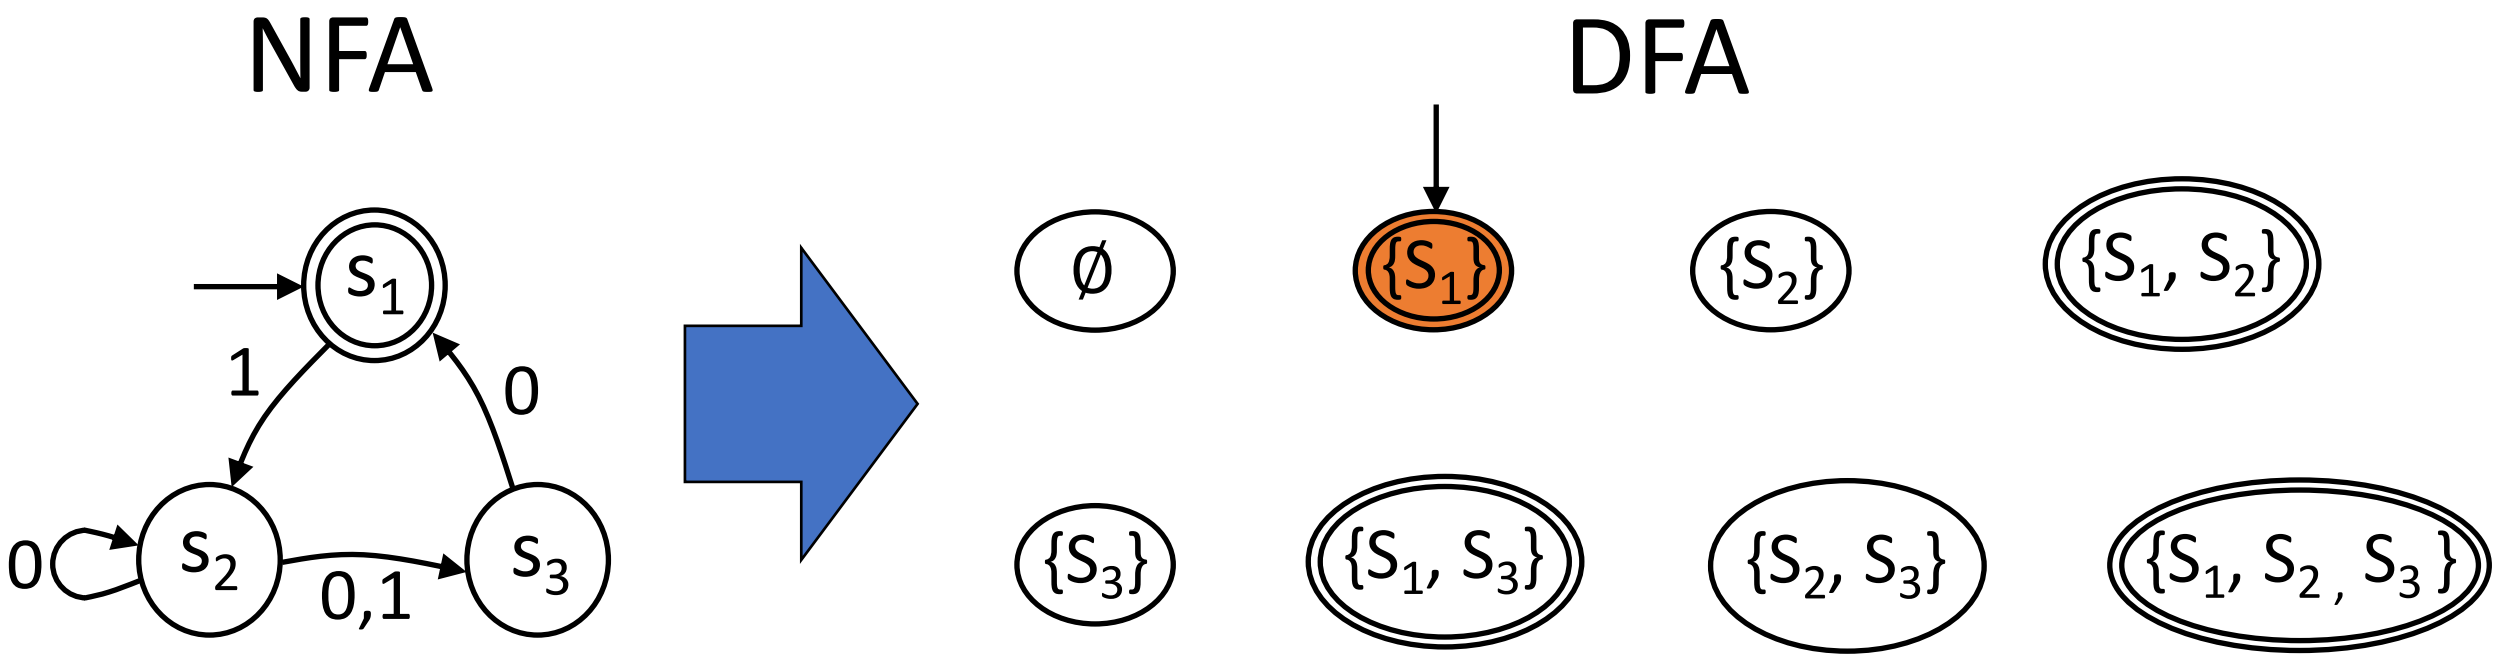


DFA states = Power set of NFA states.

Start state = NFA's start state.

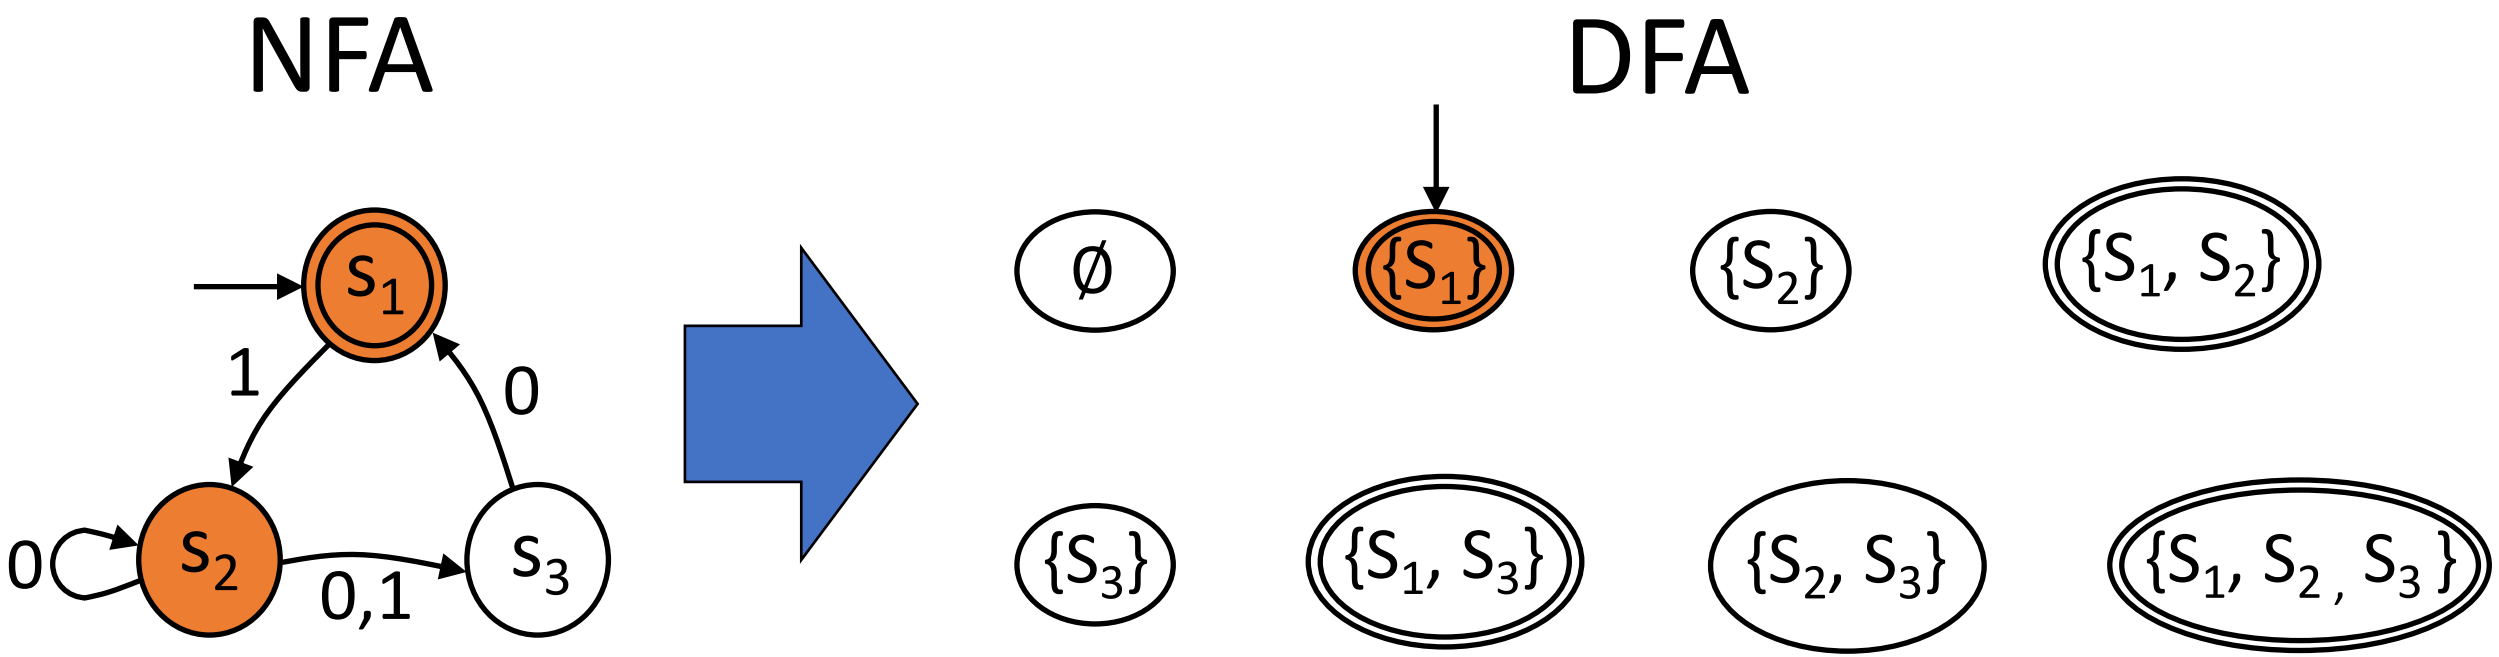
Accept states = Any state that includes accept state from NFA.

DFA vs NFA



Where should transition out of $\{S_1\}$ with character 1 go?

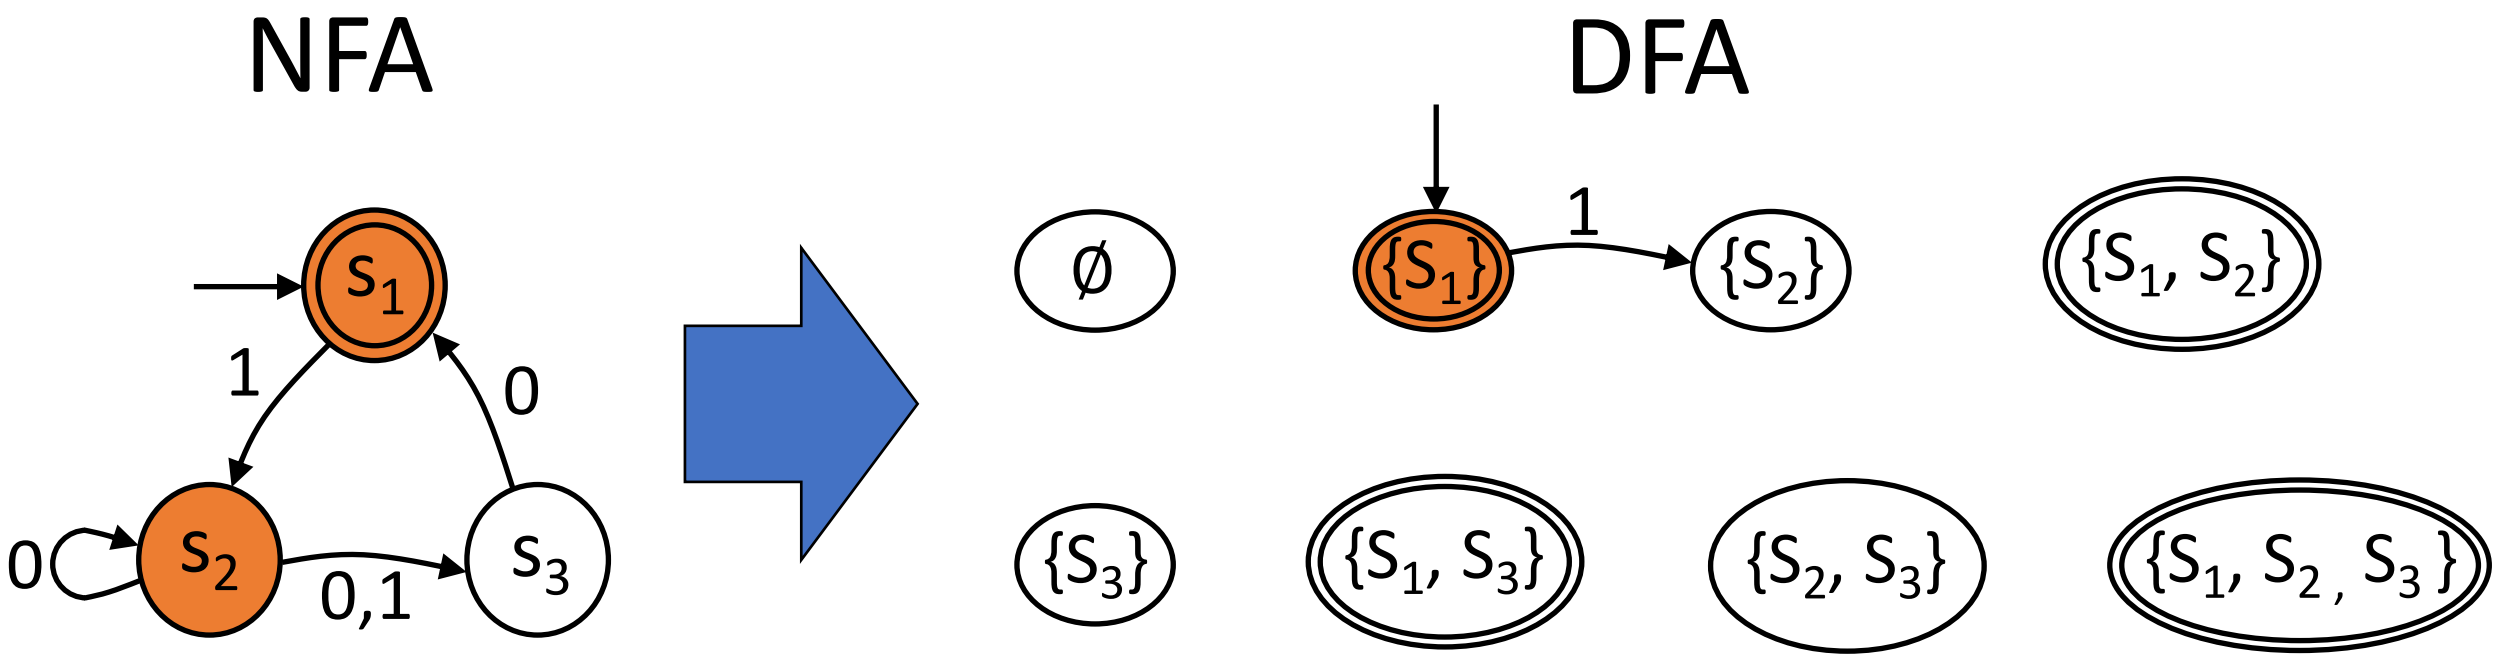
DFA vs NFA



Where should transition out of $\{S_1\}$ with character 1 go?

Wherever S_1 goes with 1 in the NFA.

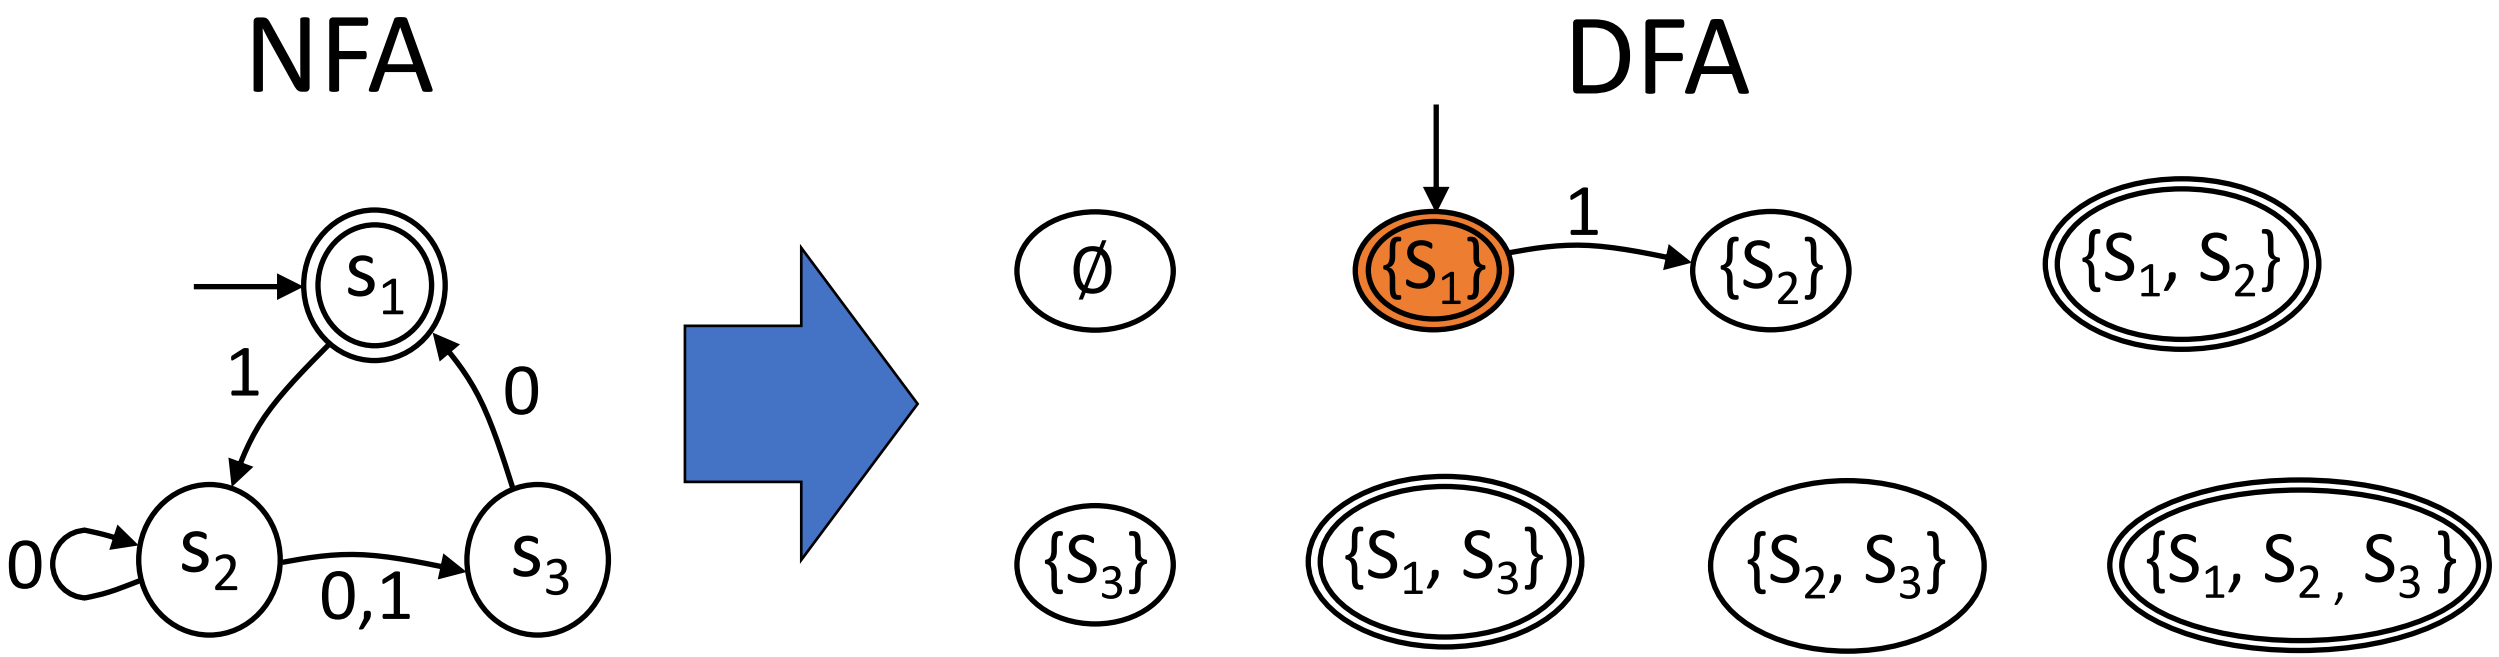
DFA vs NFA



Where should transition out of $\{S_1\}$ with character 1 go?

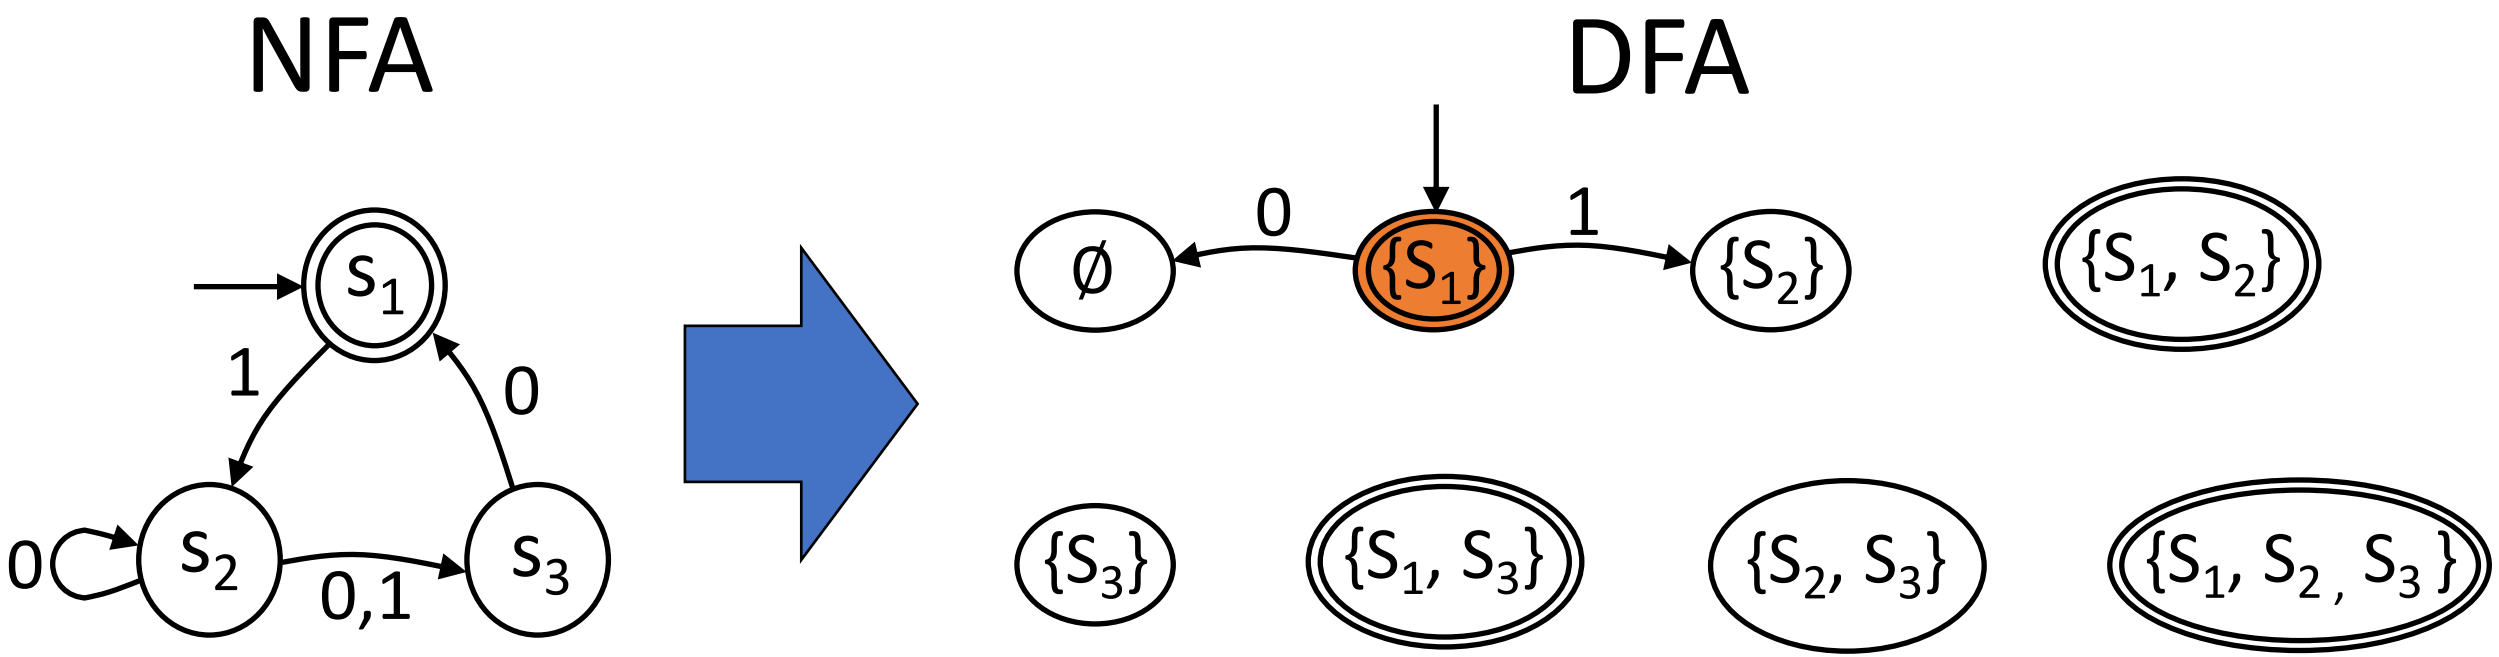
Wherever S_1 goes with 1 in the NFA.

DFA vs NFA



Where should transition out of $\{S_1\}$ with character 0 go?

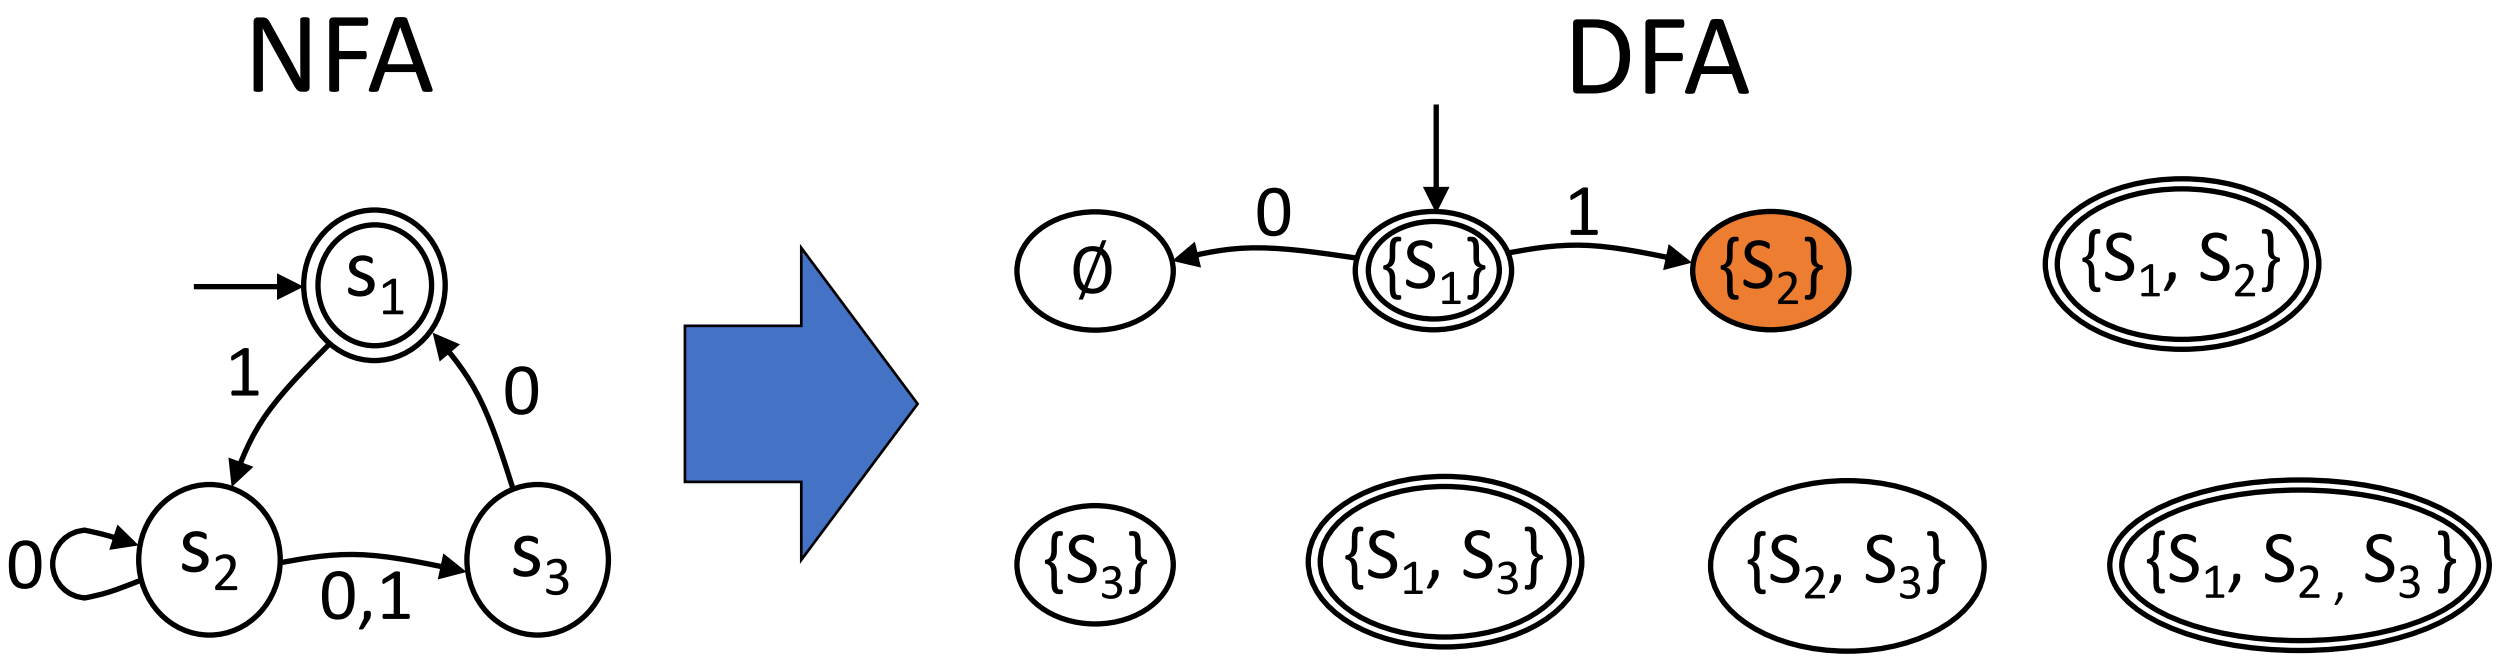
DFA vs NFA



Where should transition out of $\{S_1\}$ with character 0 go?

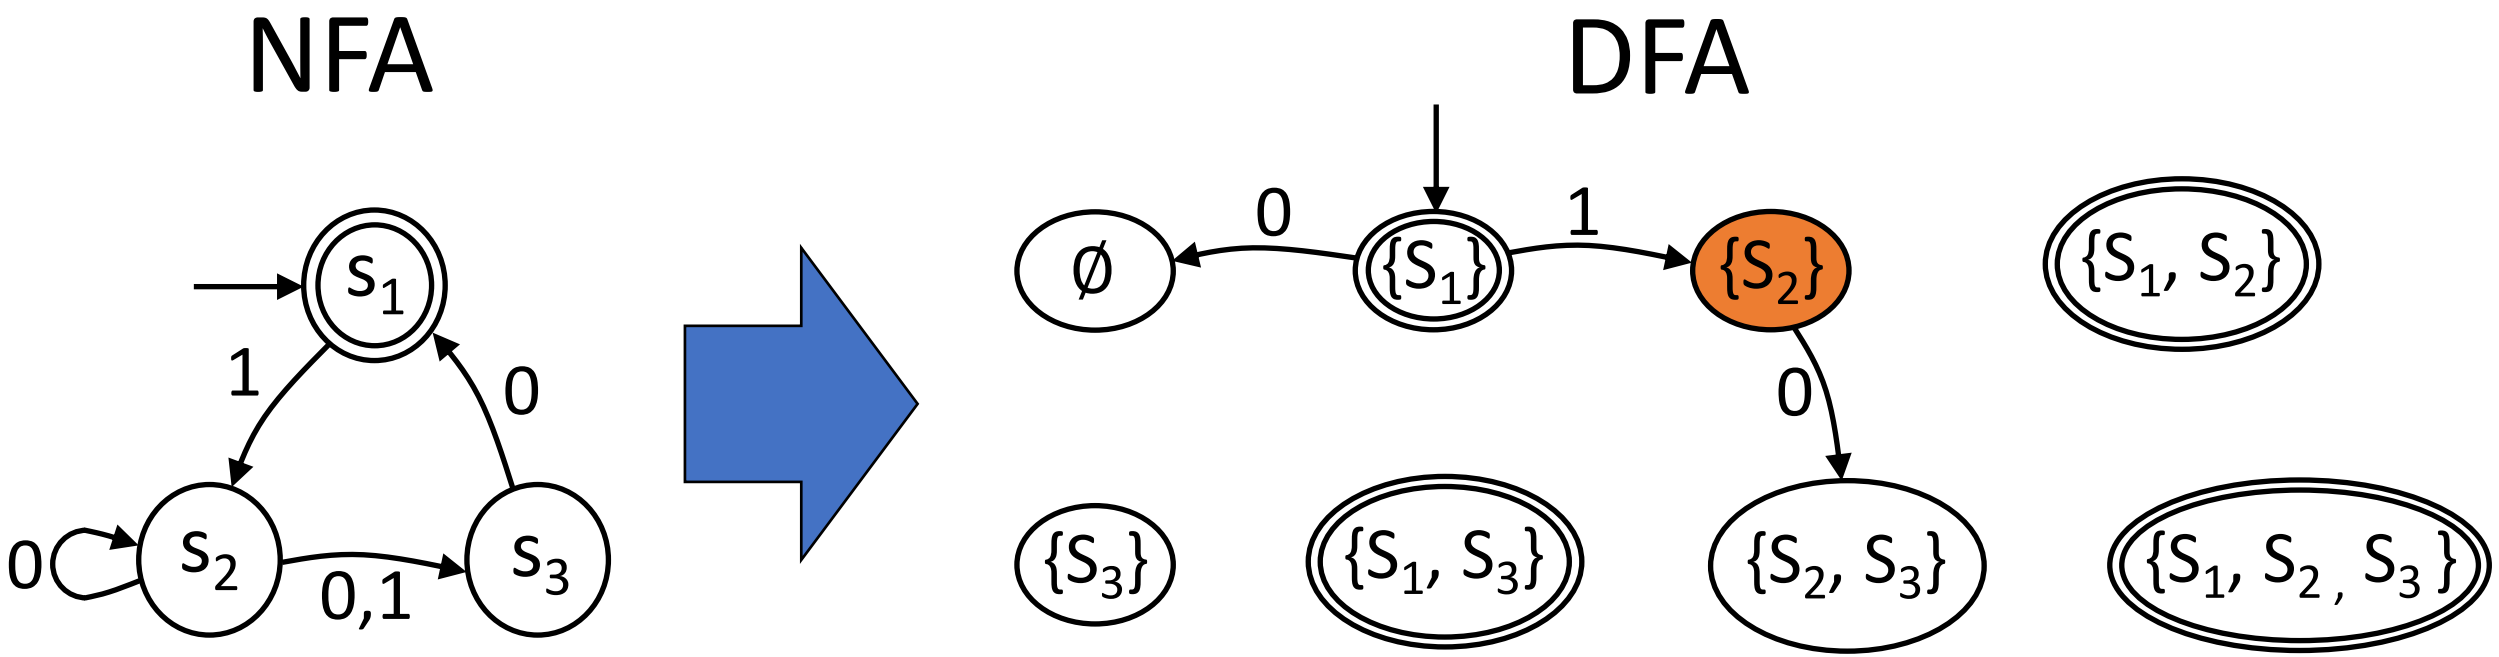
If transition is not handled by NFA, send it to Ø (junk state).

DFA vs NFA



Where should transition out of $\{S_2\}$ with character 0 go?

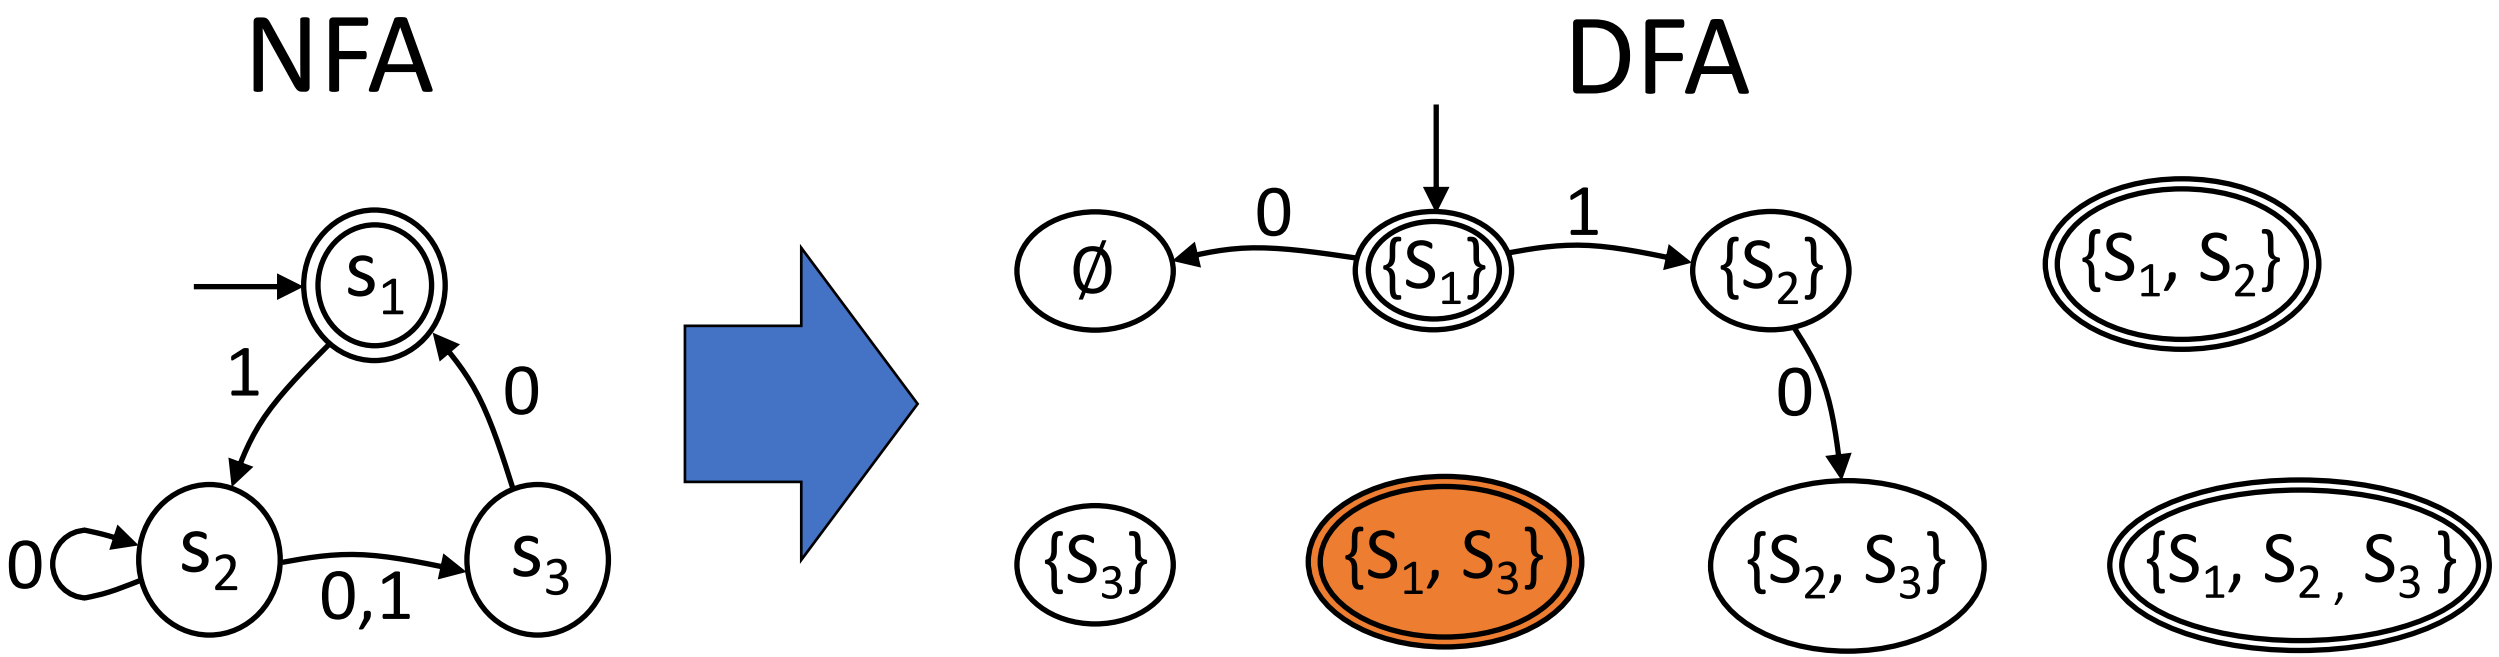
DFA vs NFA



Where should transition out of $\{S_2\}$ with character 0 go?

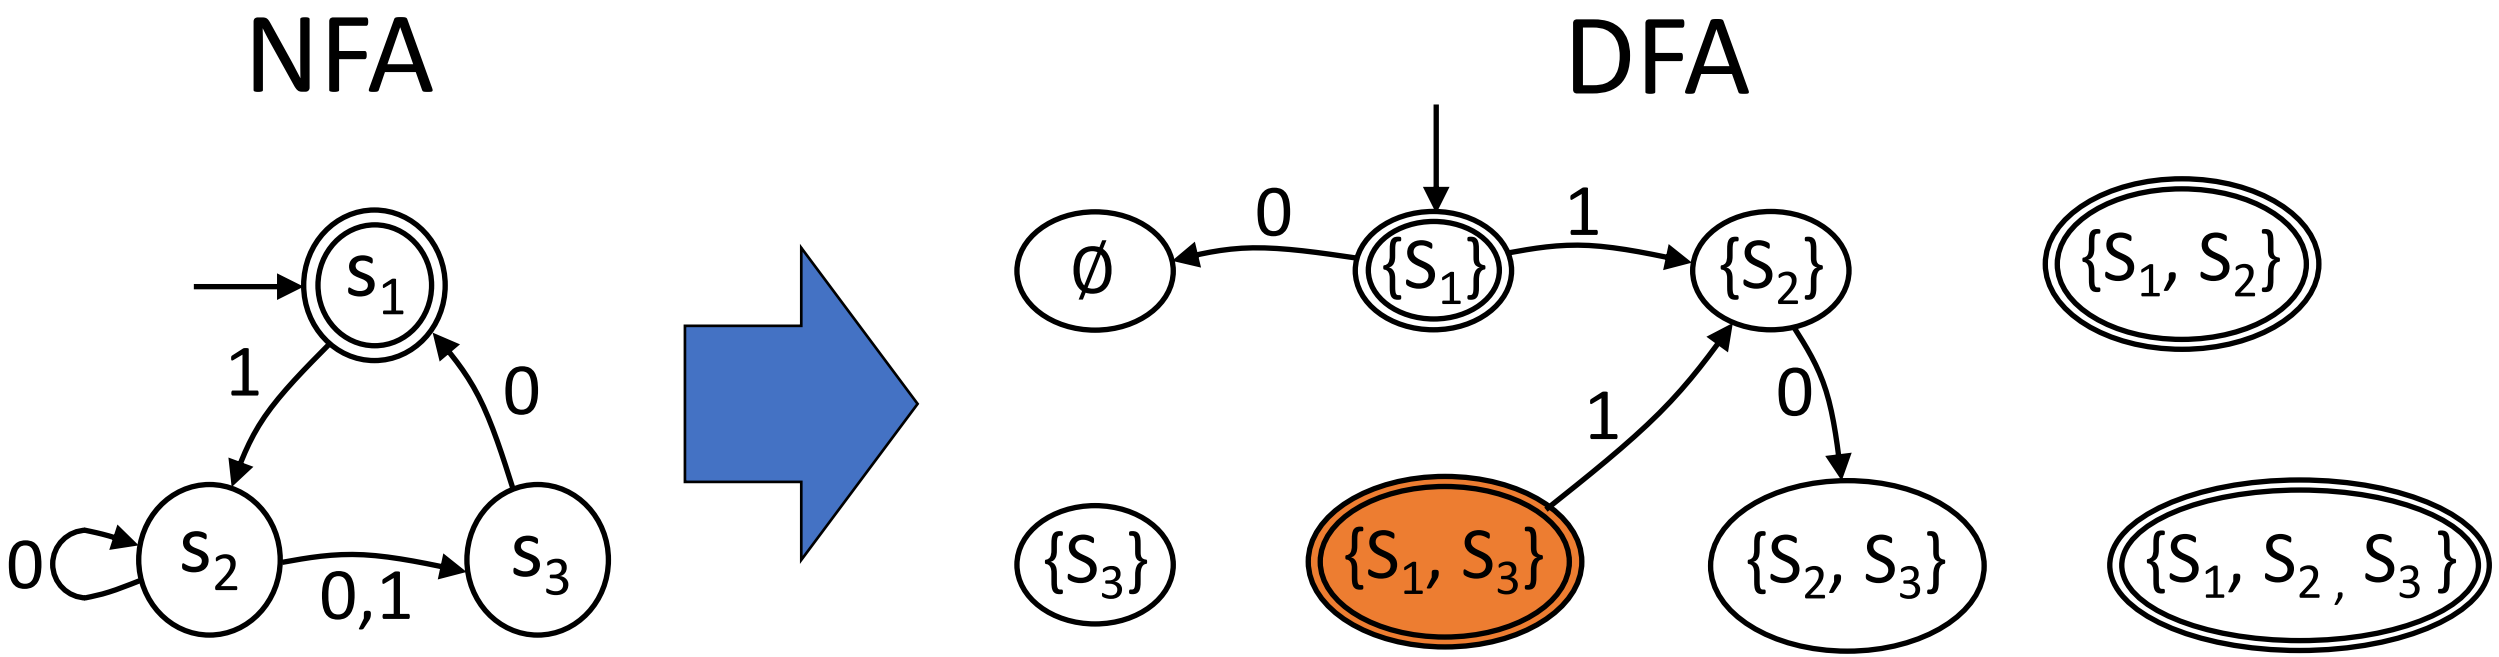
NFA could stay in S_2 or go to S_3, so $\{S_2, S_3\}$

DFA vs NFA



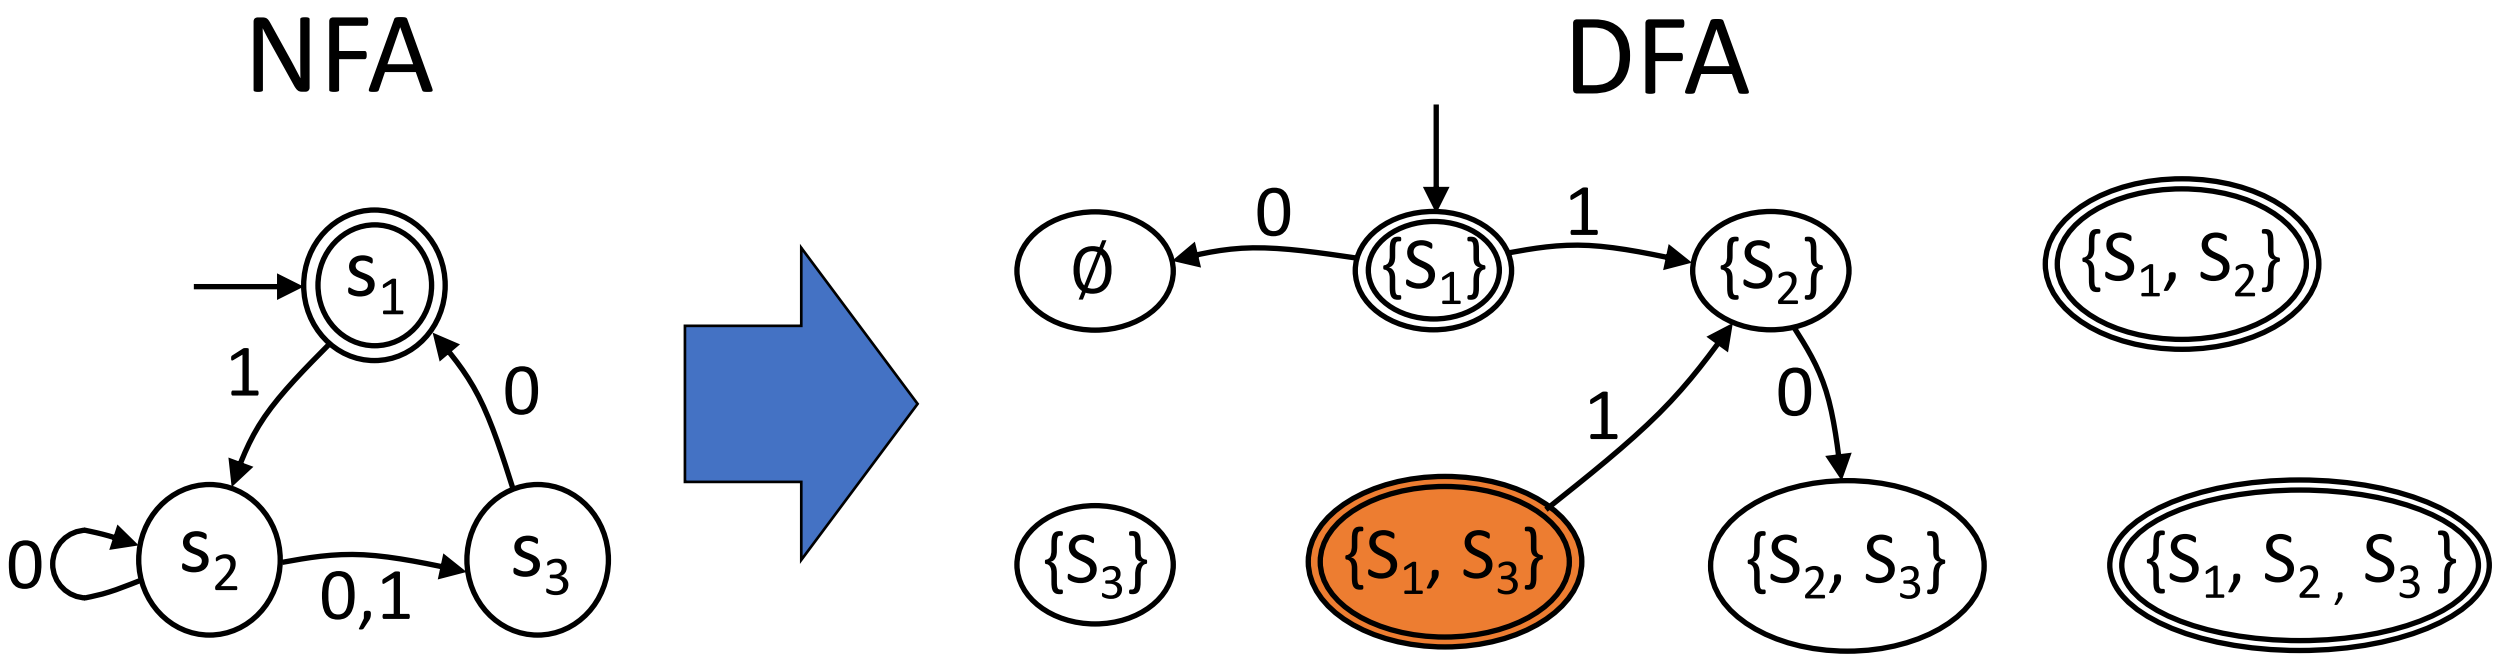
Where should transition out of $\{S_1, S_3\}$ with character 1 go?

DFA vs NFA



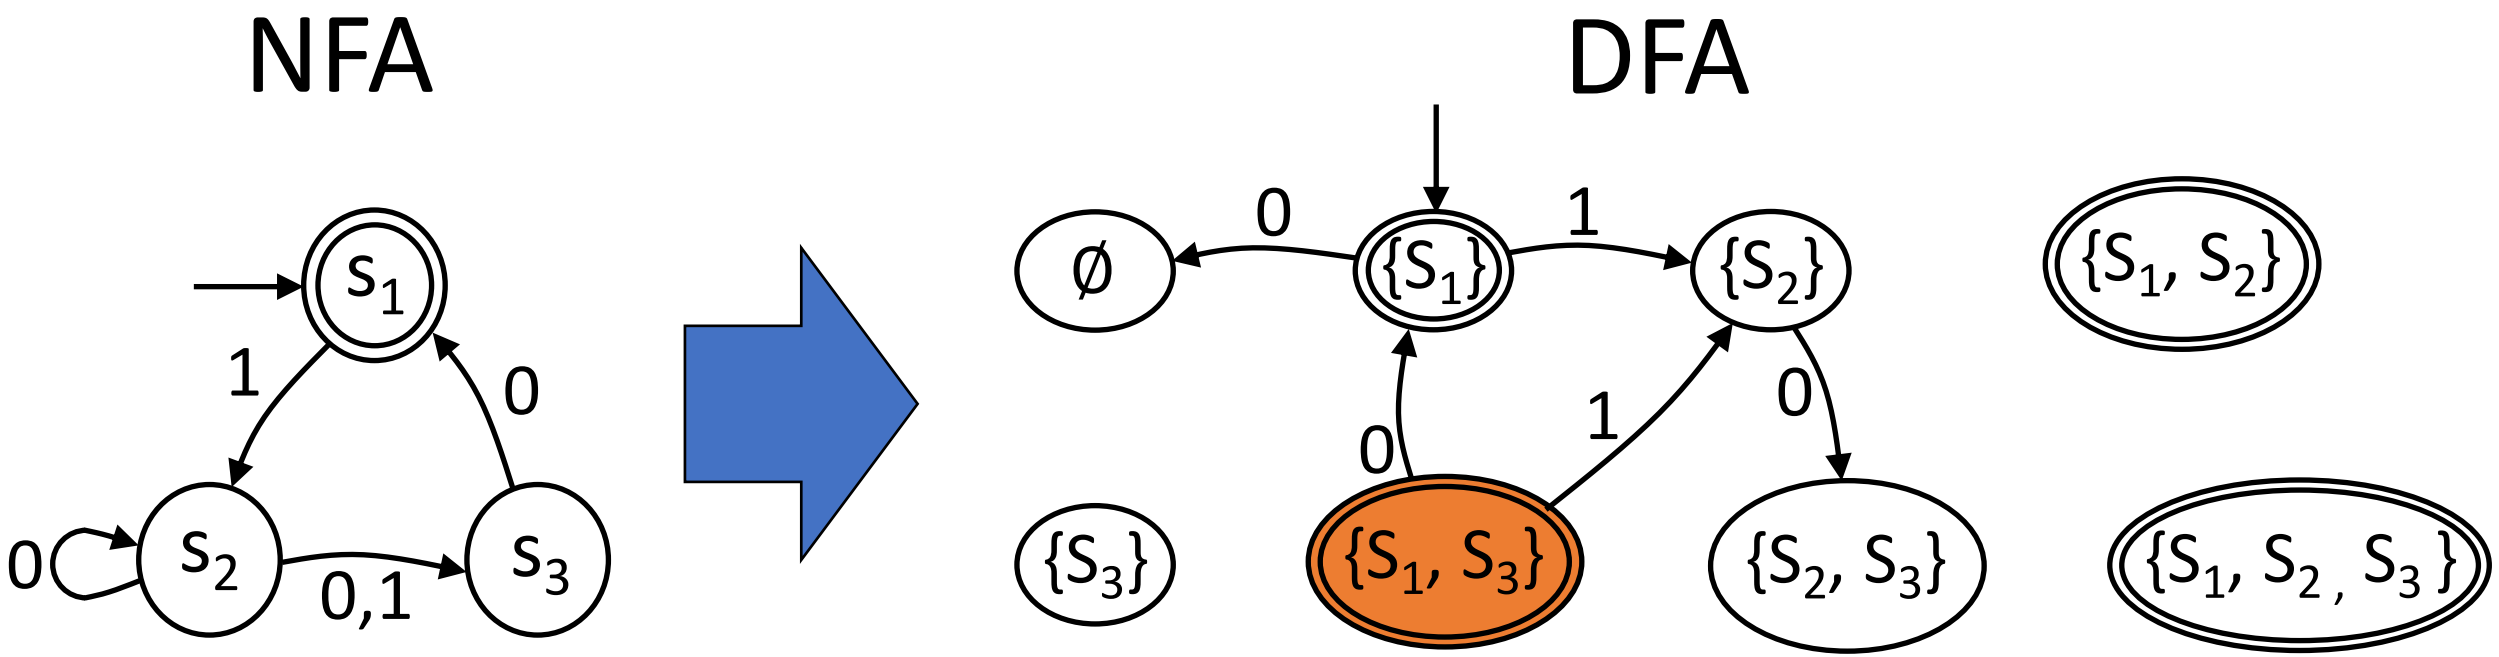
Where should transition out of $\{S_1, S_3\}$ with character 1 go?

DFA vs NFA



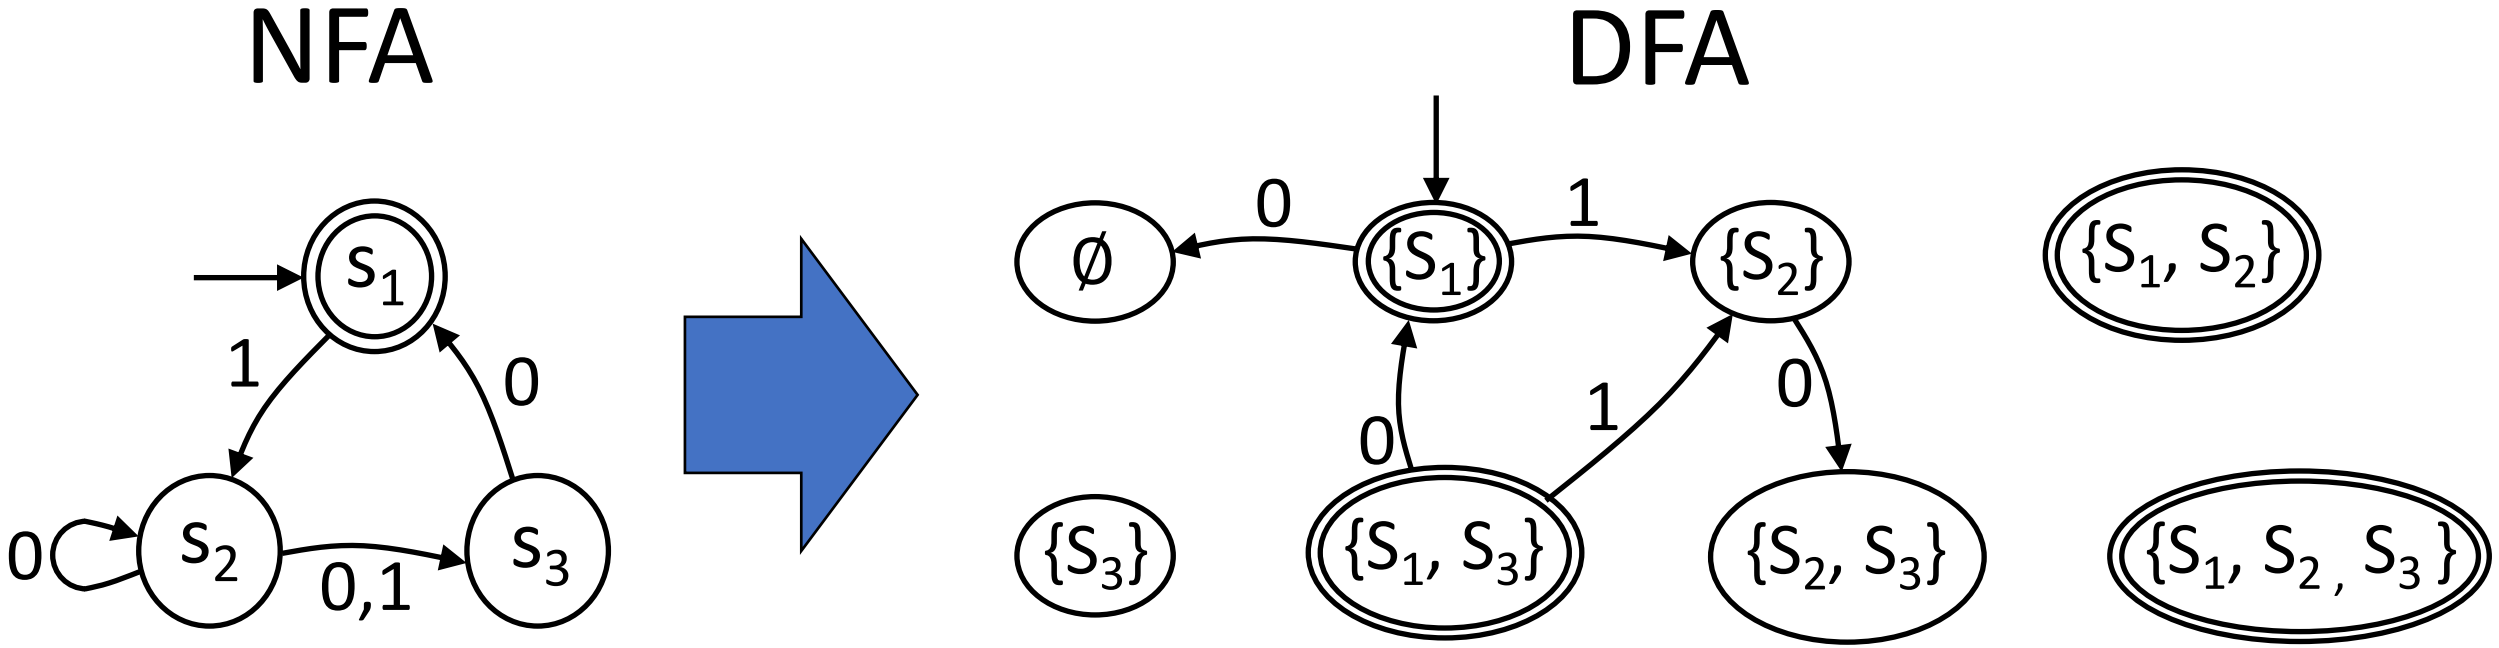
Where should transition out of $\{S_1, S_3\}$ with character 0 go?

DFA vs NFA



Where should transition out of $\{S_1, S_3\}$ with character 0 go?

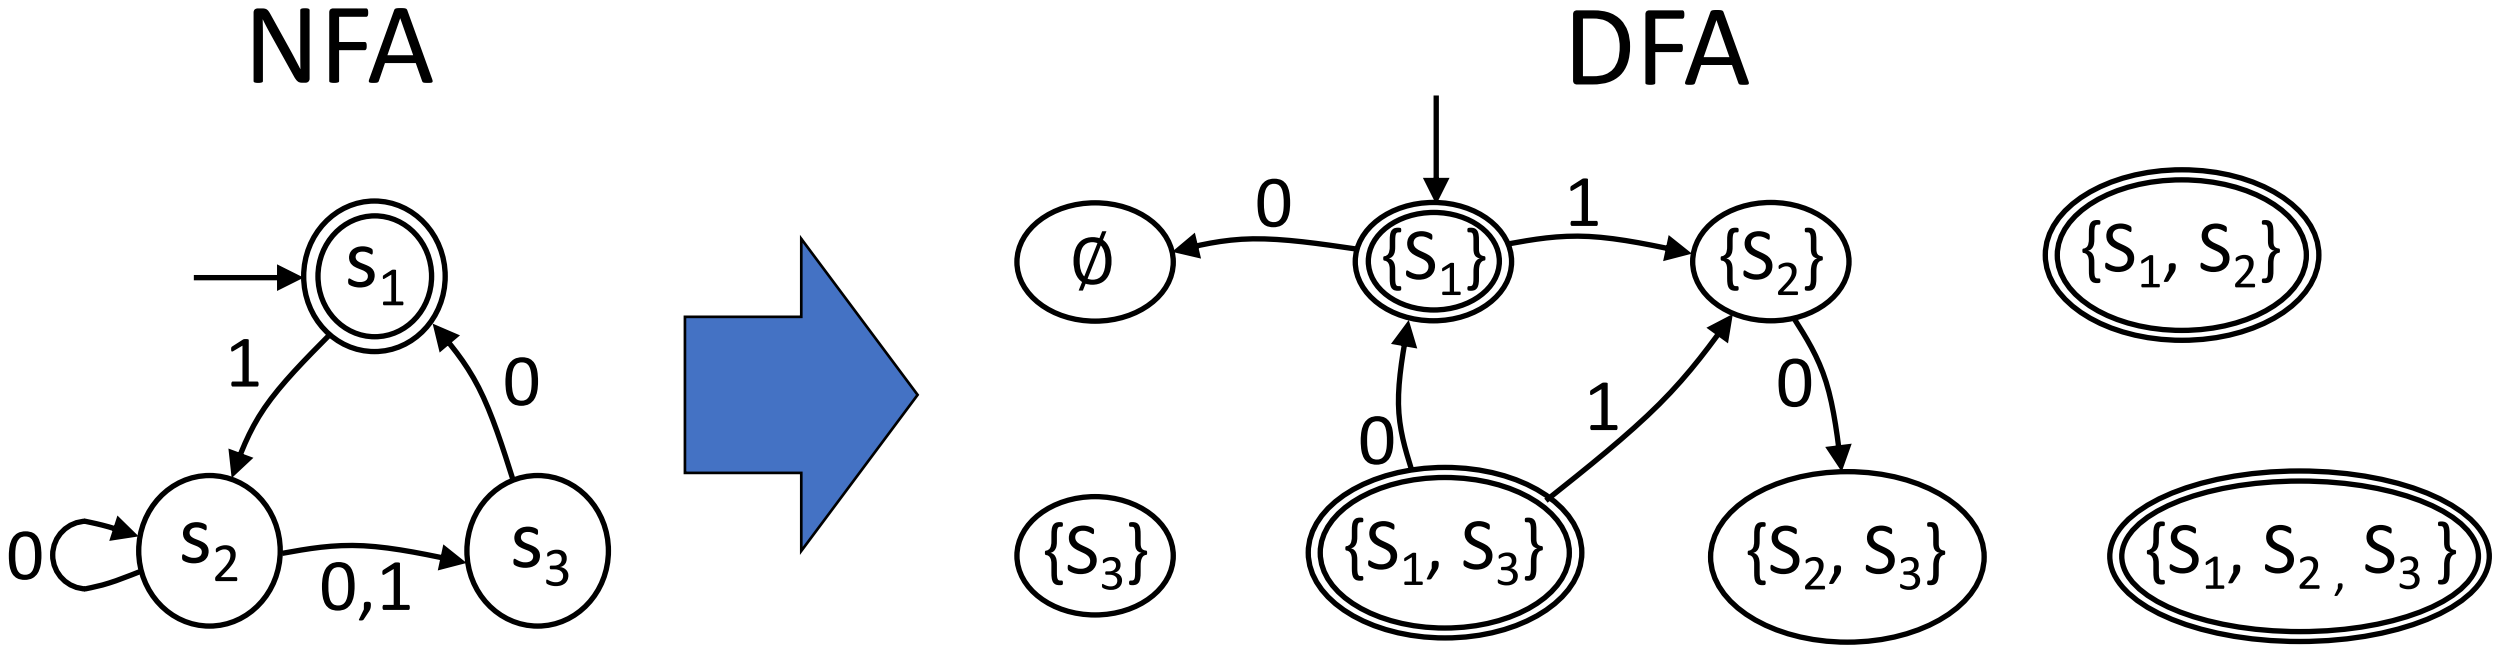
DFA vs NFA



Rule?

DFA state transitions to DFA state consisting of all states it's NFA states transition to.

DFA vs NFA



Rule? For each DFA state R and $e \in \Sigma$,

transition$(R, e) = \{q \in$ NFA: $q \in$ transition(r, e) for some $r \in R\}$

DFA vs NFA

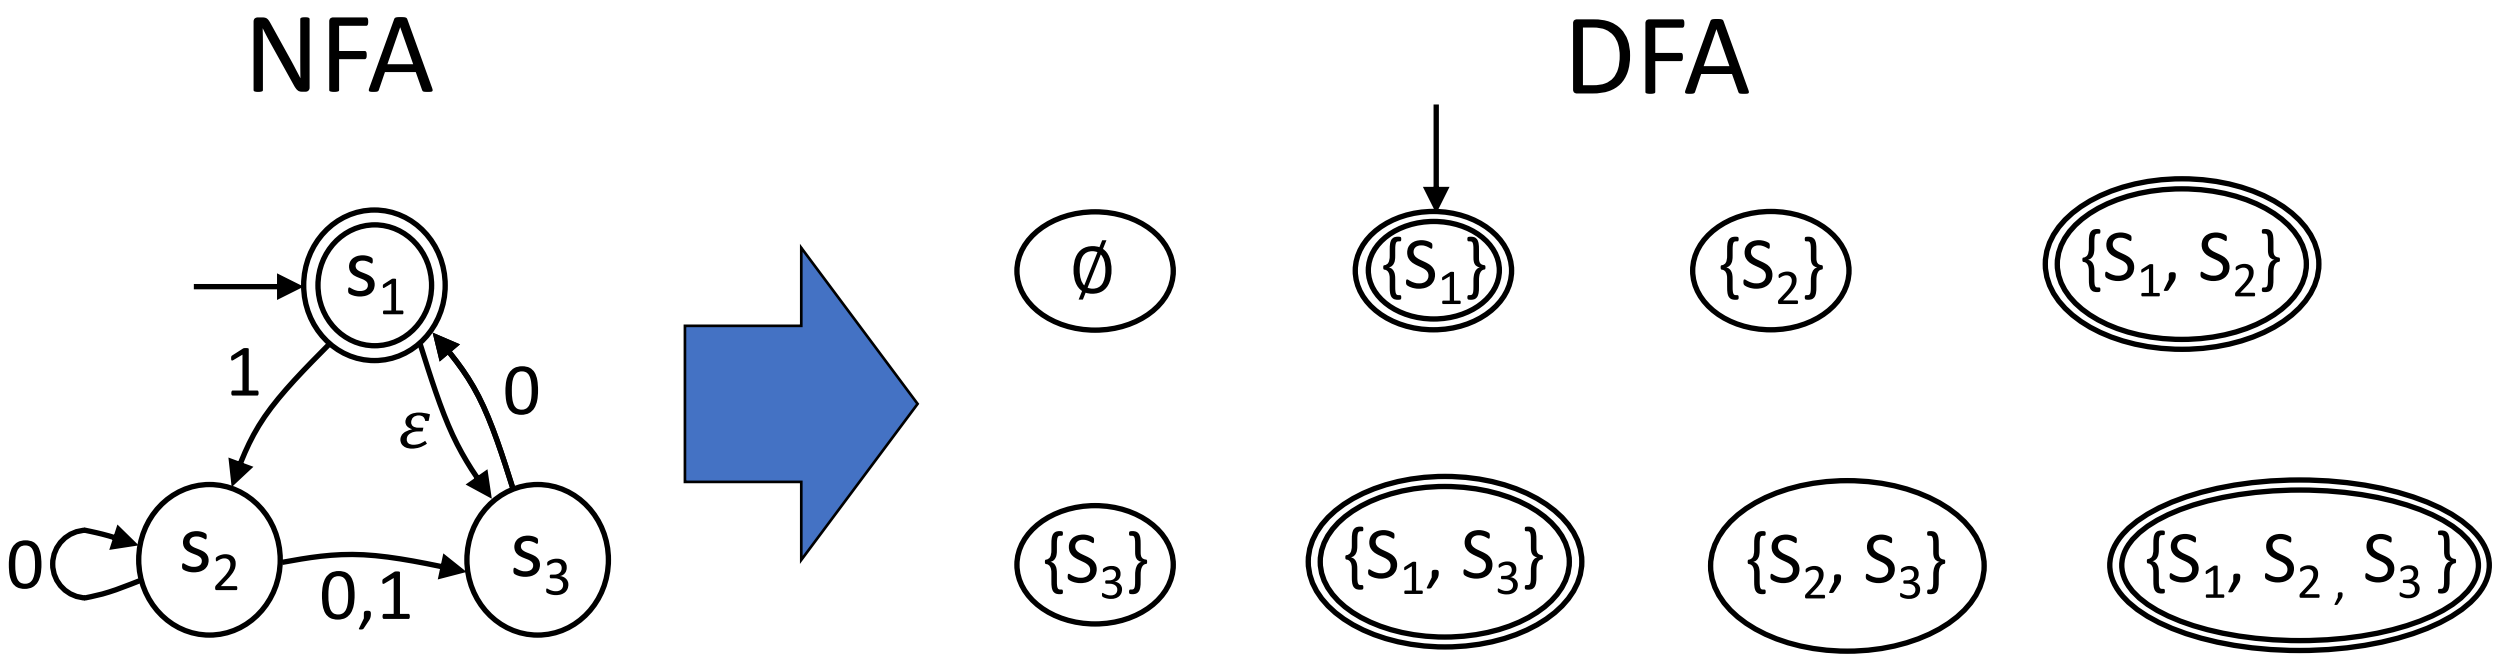
What about ε-transitions?

Define extension of DFA state R:

$E(R) = \{q \in \text{NFA: } q \text{ reachable from } r \in R \text{ with } \geq 0 \text{ ε−transitions}\}$

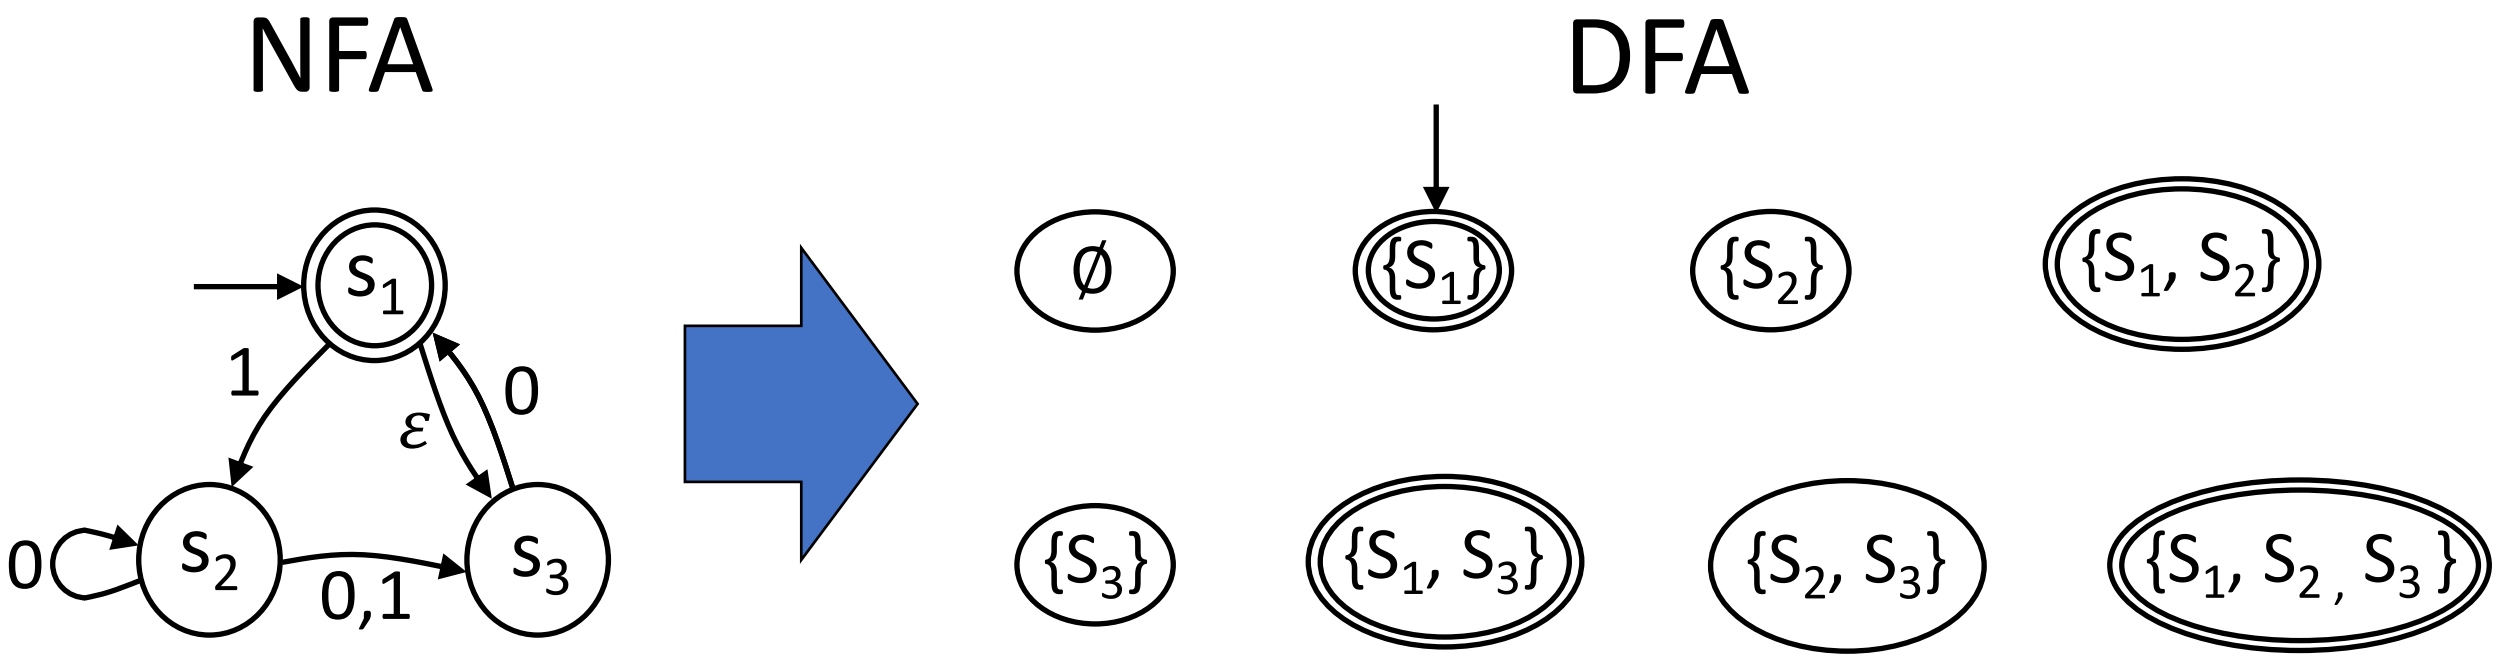
DFA vs NFA



$E(R) = \{q \in$ NFA: q reachable from $r \in R$ with ≥ 0 ε−transitions$\}$

Example: $E(\{S_2, S_3\}) = ?$

DFA vs NFA

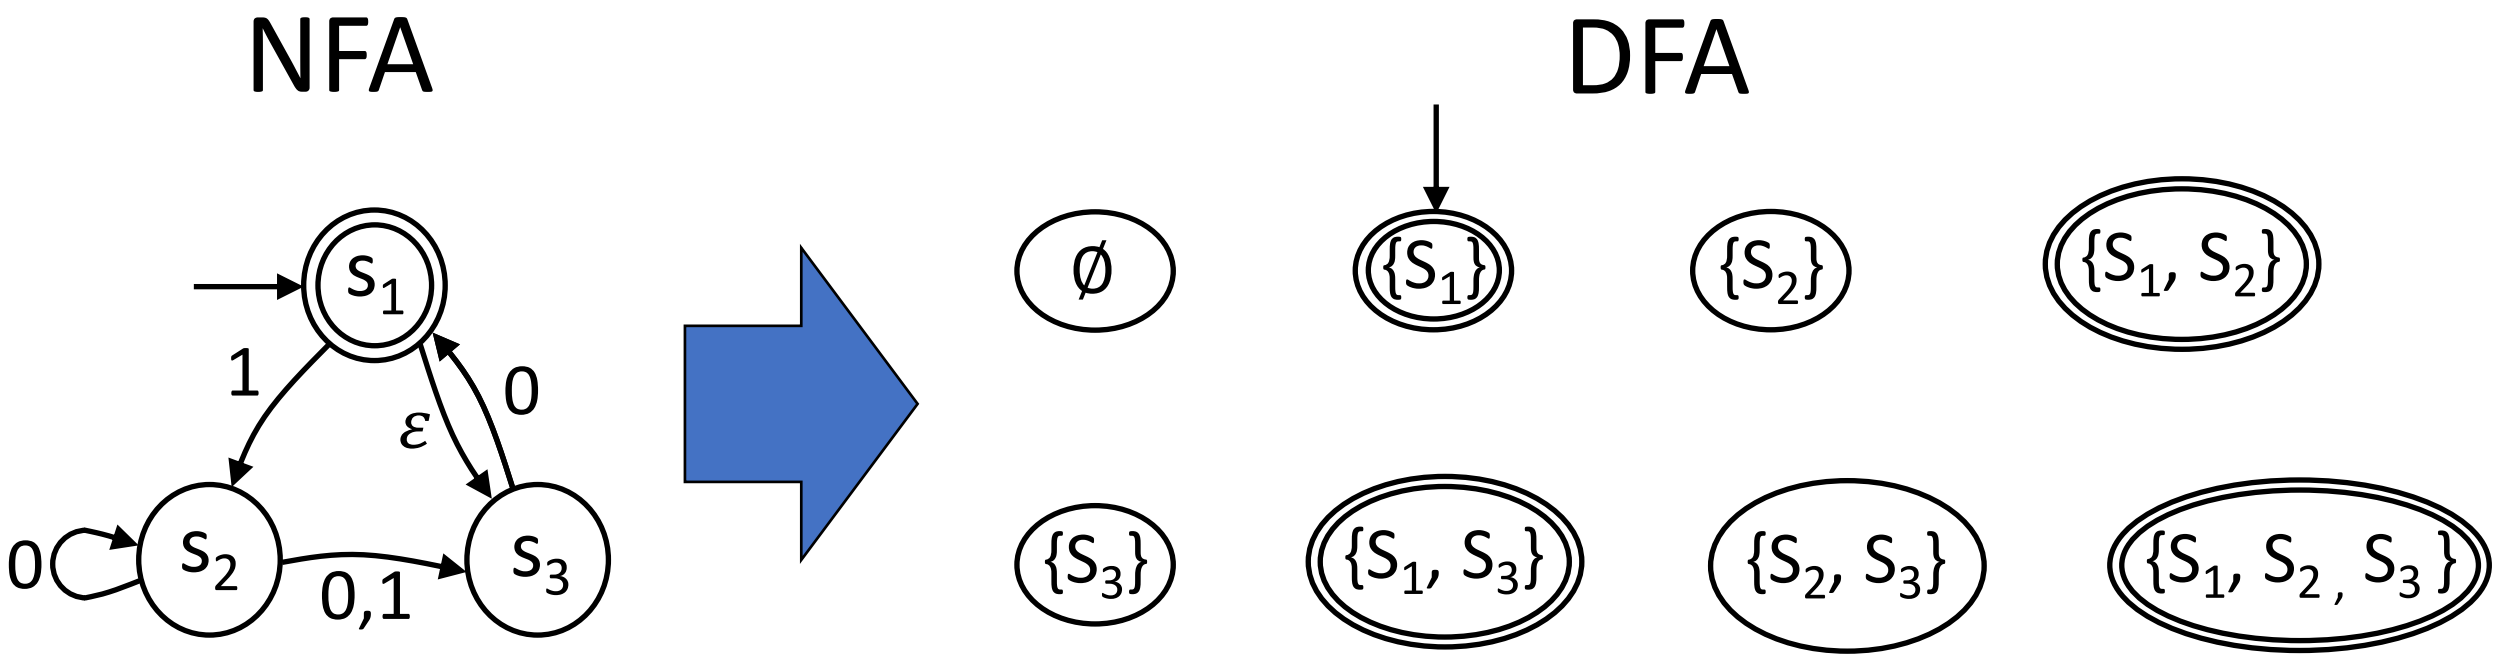


$E(R) = \{q \in \text{NFA: } q \text{ reachable from } r \in R \text{ with } \geq 0 \text{ ε−transitions}\}$

Example: $E(\{S_2, S_3\}) = \{S_2, S_3\}$

$E(\{S_1, S_2\}) = ?$

DFA vs NFA



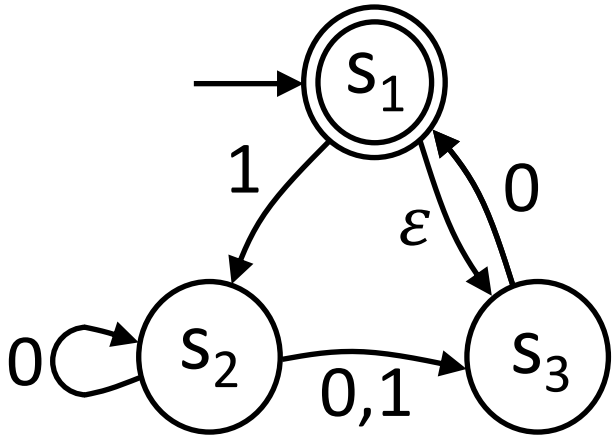
$E(R) = \{q \in \text{NFA: } q \text{ reachable from } r \in R \text{ with } \geq 0 \text{ ε−transitions}\}$

Example: $E(\{S_2, S_3\}) = \{S_2, S_3\}$

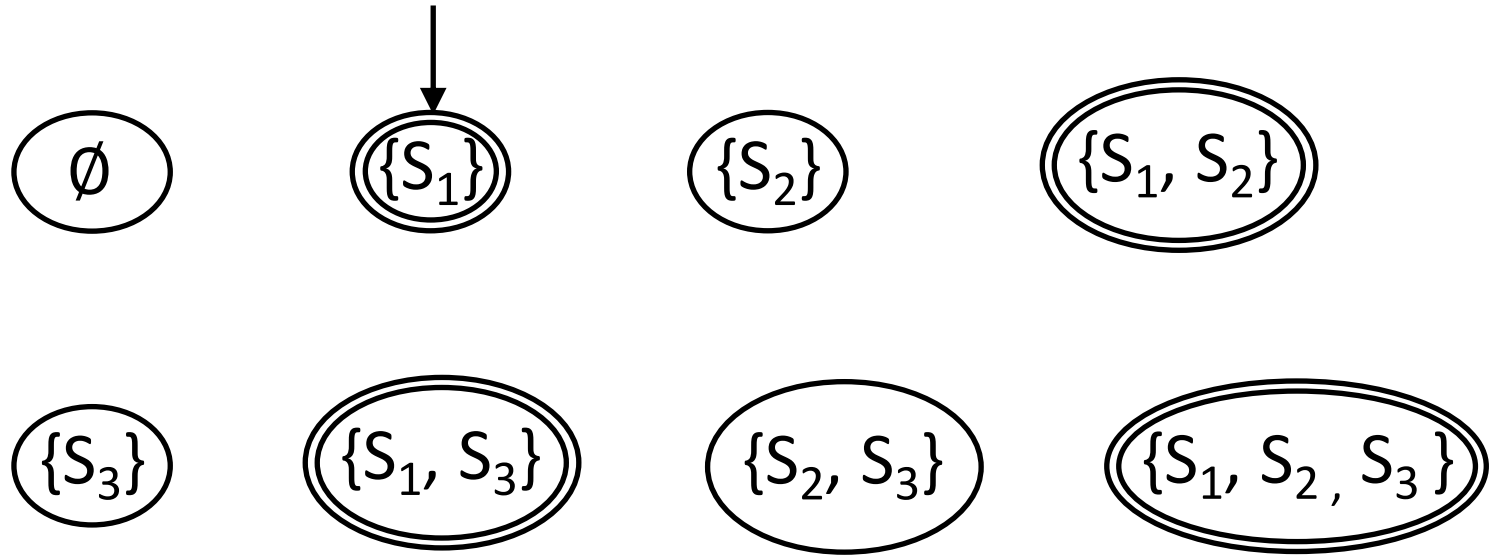
$E(\{S_1, S_2\}) = \{S_1, S_2, S_3\}$

DFA vs NFA

NFA



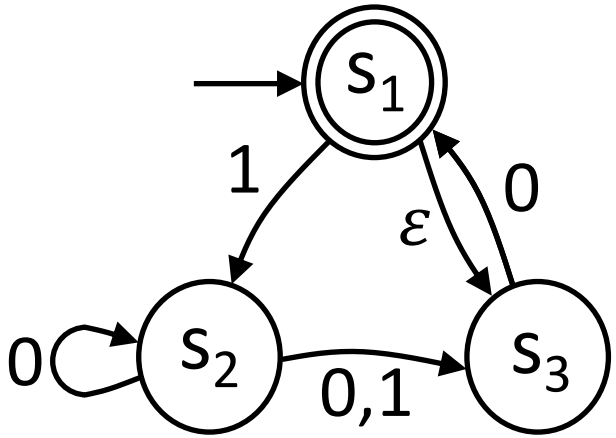
DFA



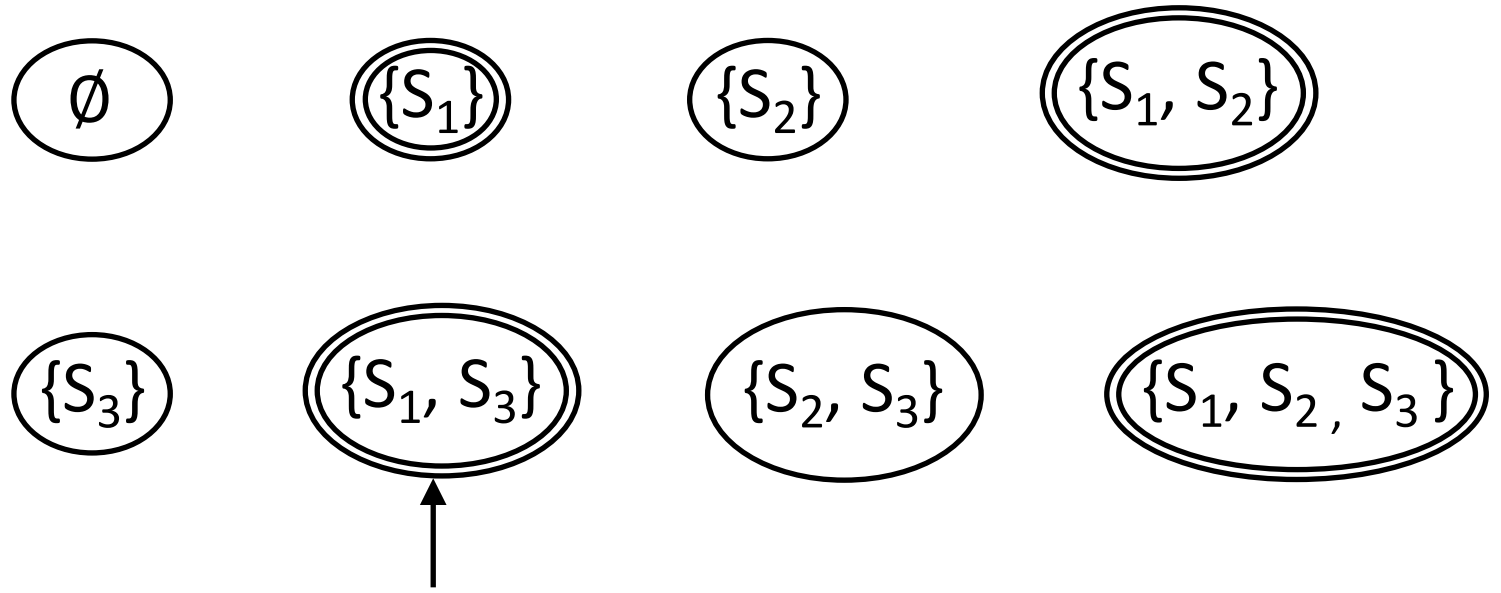
Make start state = ?

DFA vs NFA

NFA



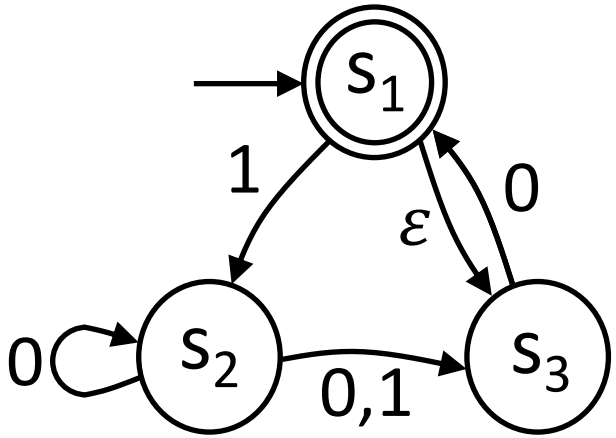
DFA



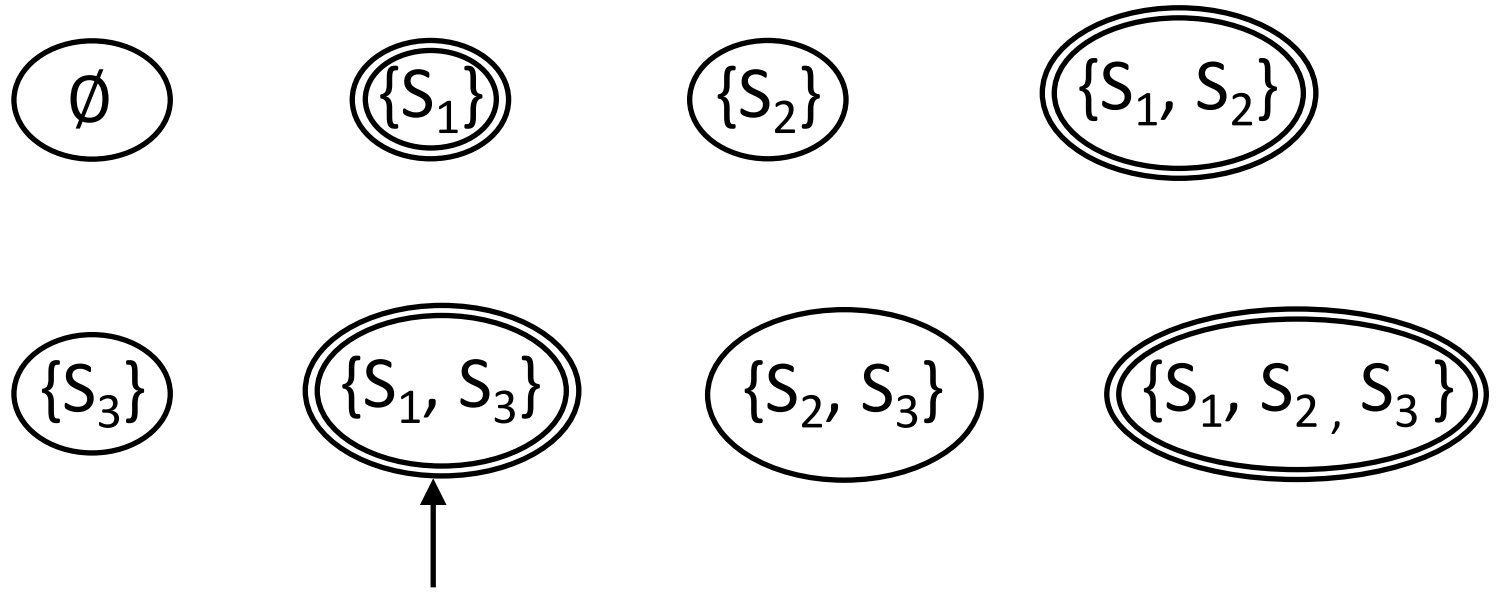
Make start state $= E(\{S_1\}) = \{S_1, S_3\}$

DFA vs NFA

NFA



DFA



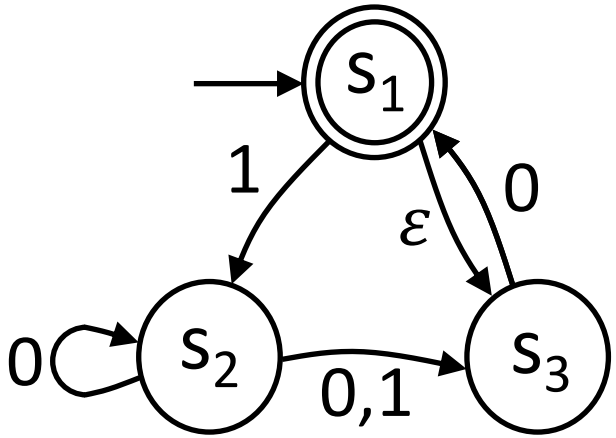
Make transitions:

$E\big(\text{transition}(r, e)\big)$

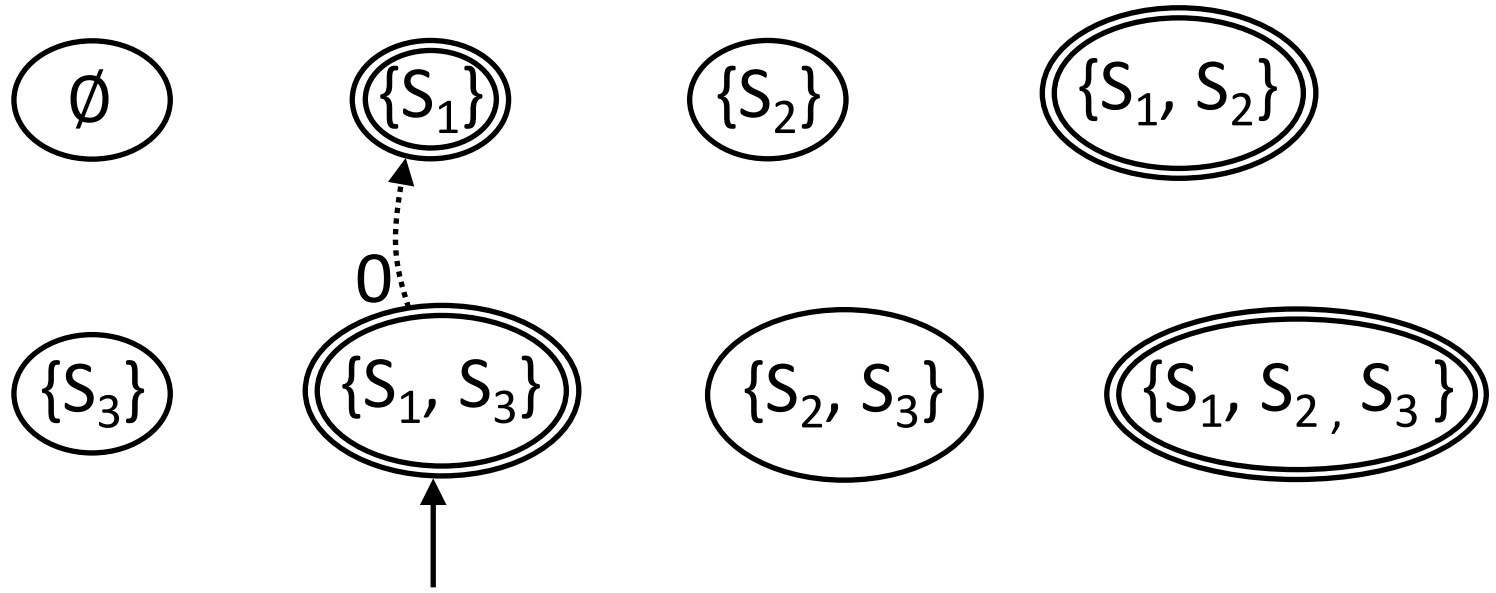
$\text{transition}(R, e) = \{q \in \text{NFA}: q \in \sout{\text{transition}(r, e)} \text{ for some } r \in R\}$

DFA vs NFA

NFA



DFA



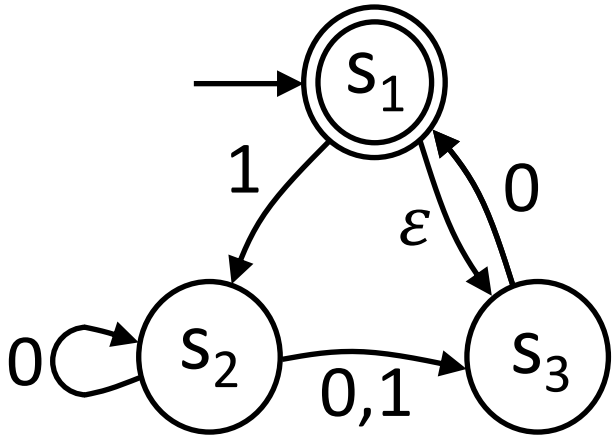
Make transitions:

$E\big(\text{transition}(r, e)\big)$

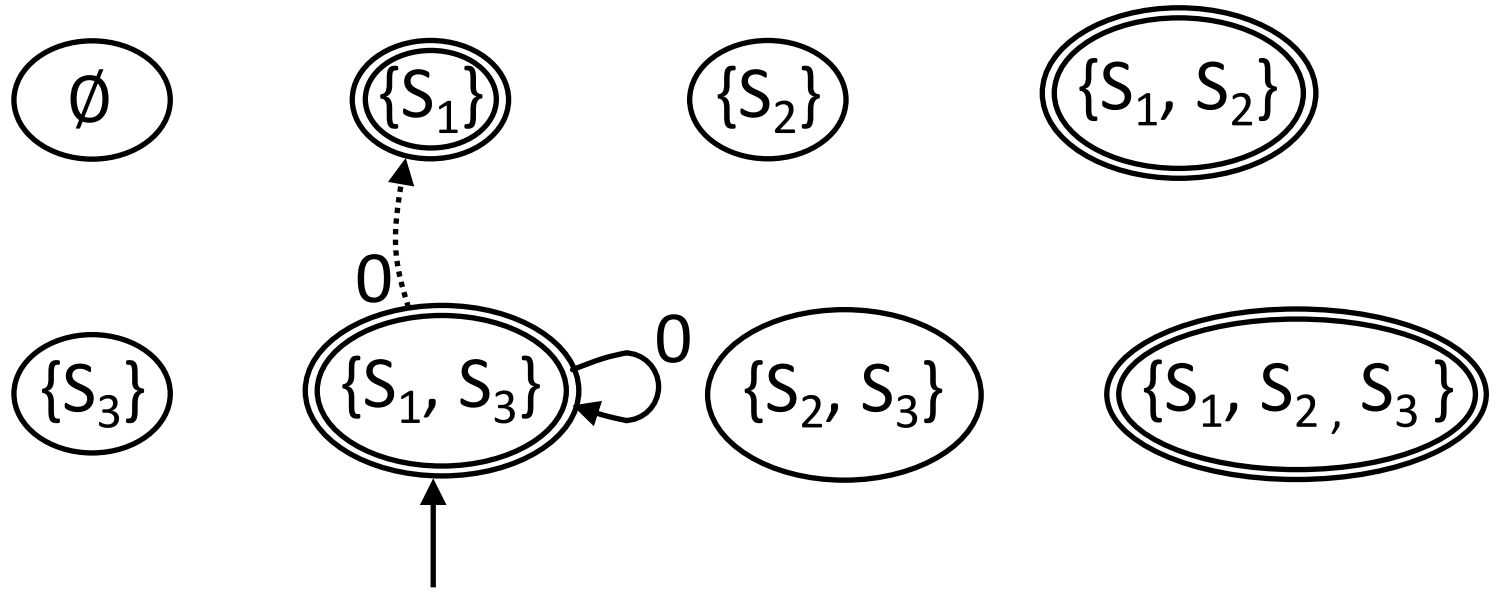
$\text{transition}(R, e) = \{q \in \text{NFA}: q \in \sout{\text{transition}(r, e)} \text{ for some } r \in R\}$

DFA vs NFA

NFA



DFA



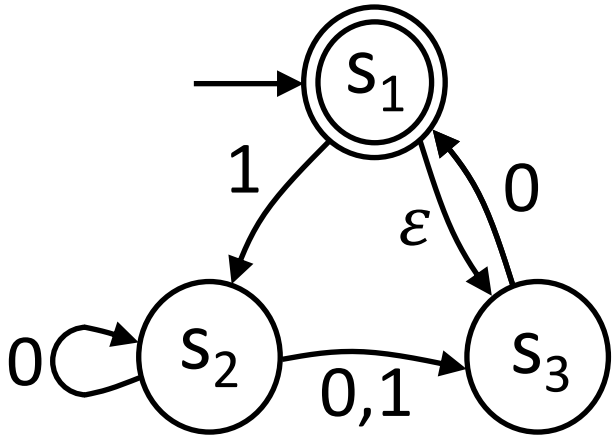
Make transitions:

$E\big(\text{transition}(r, e)\big)$

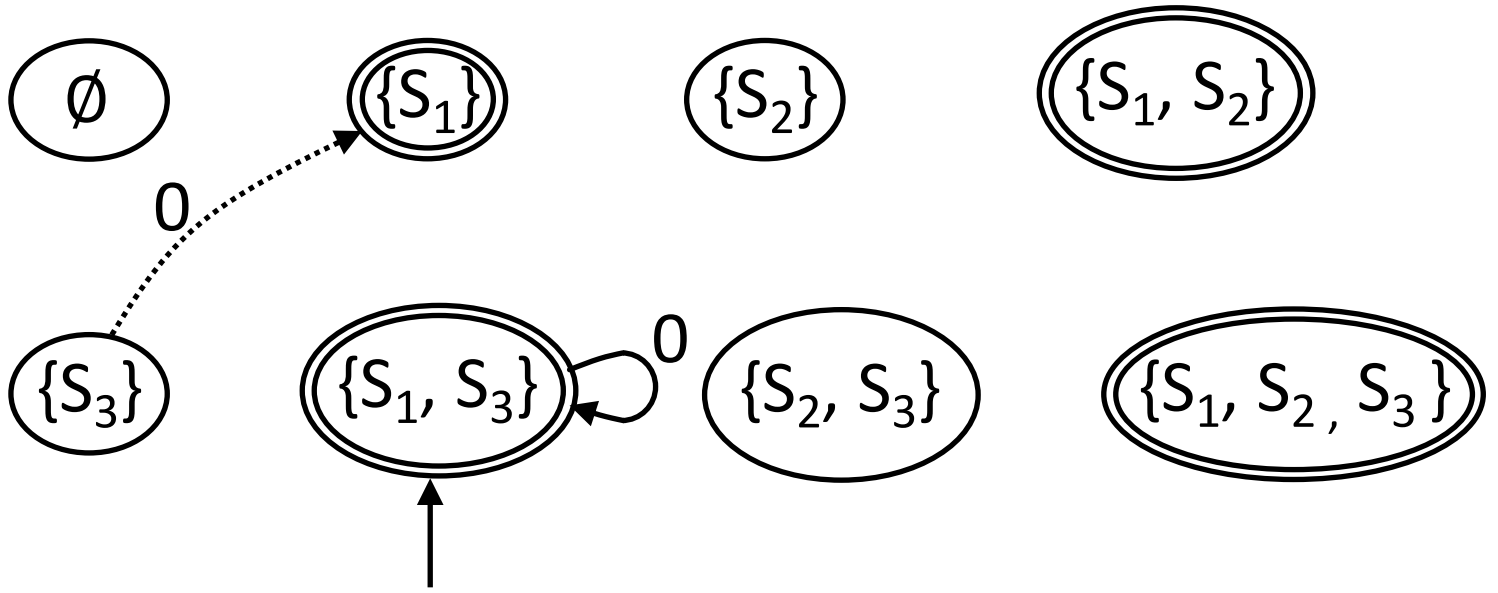
$\text{transition}(R, e) = \{q \in \text{NFA}: q \in \sout{\text{transition}(r, e)} \text{ for some } r \in R\}$

DFA vs NFA

NFA



DFA



Make transitions:

$E\big(\text{transition}(r, e)\big)$

$\text{transition}(R, e) = \{q \in \text{NFA}: q \in \sout{\text{transition}(r, e)} \text{ for some } r \in R\}$

DFA vs NFA

NFA

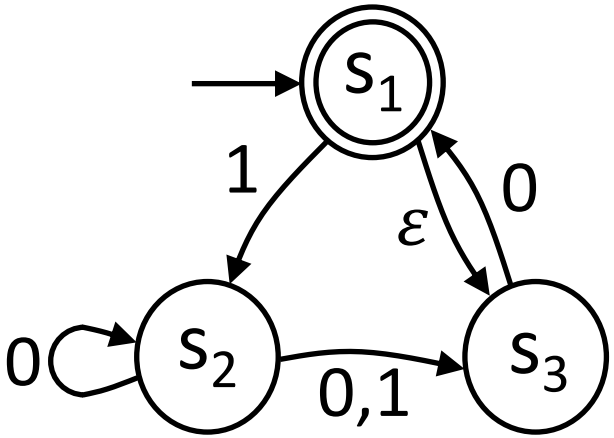
DFA vs NFA

NFA



DFA

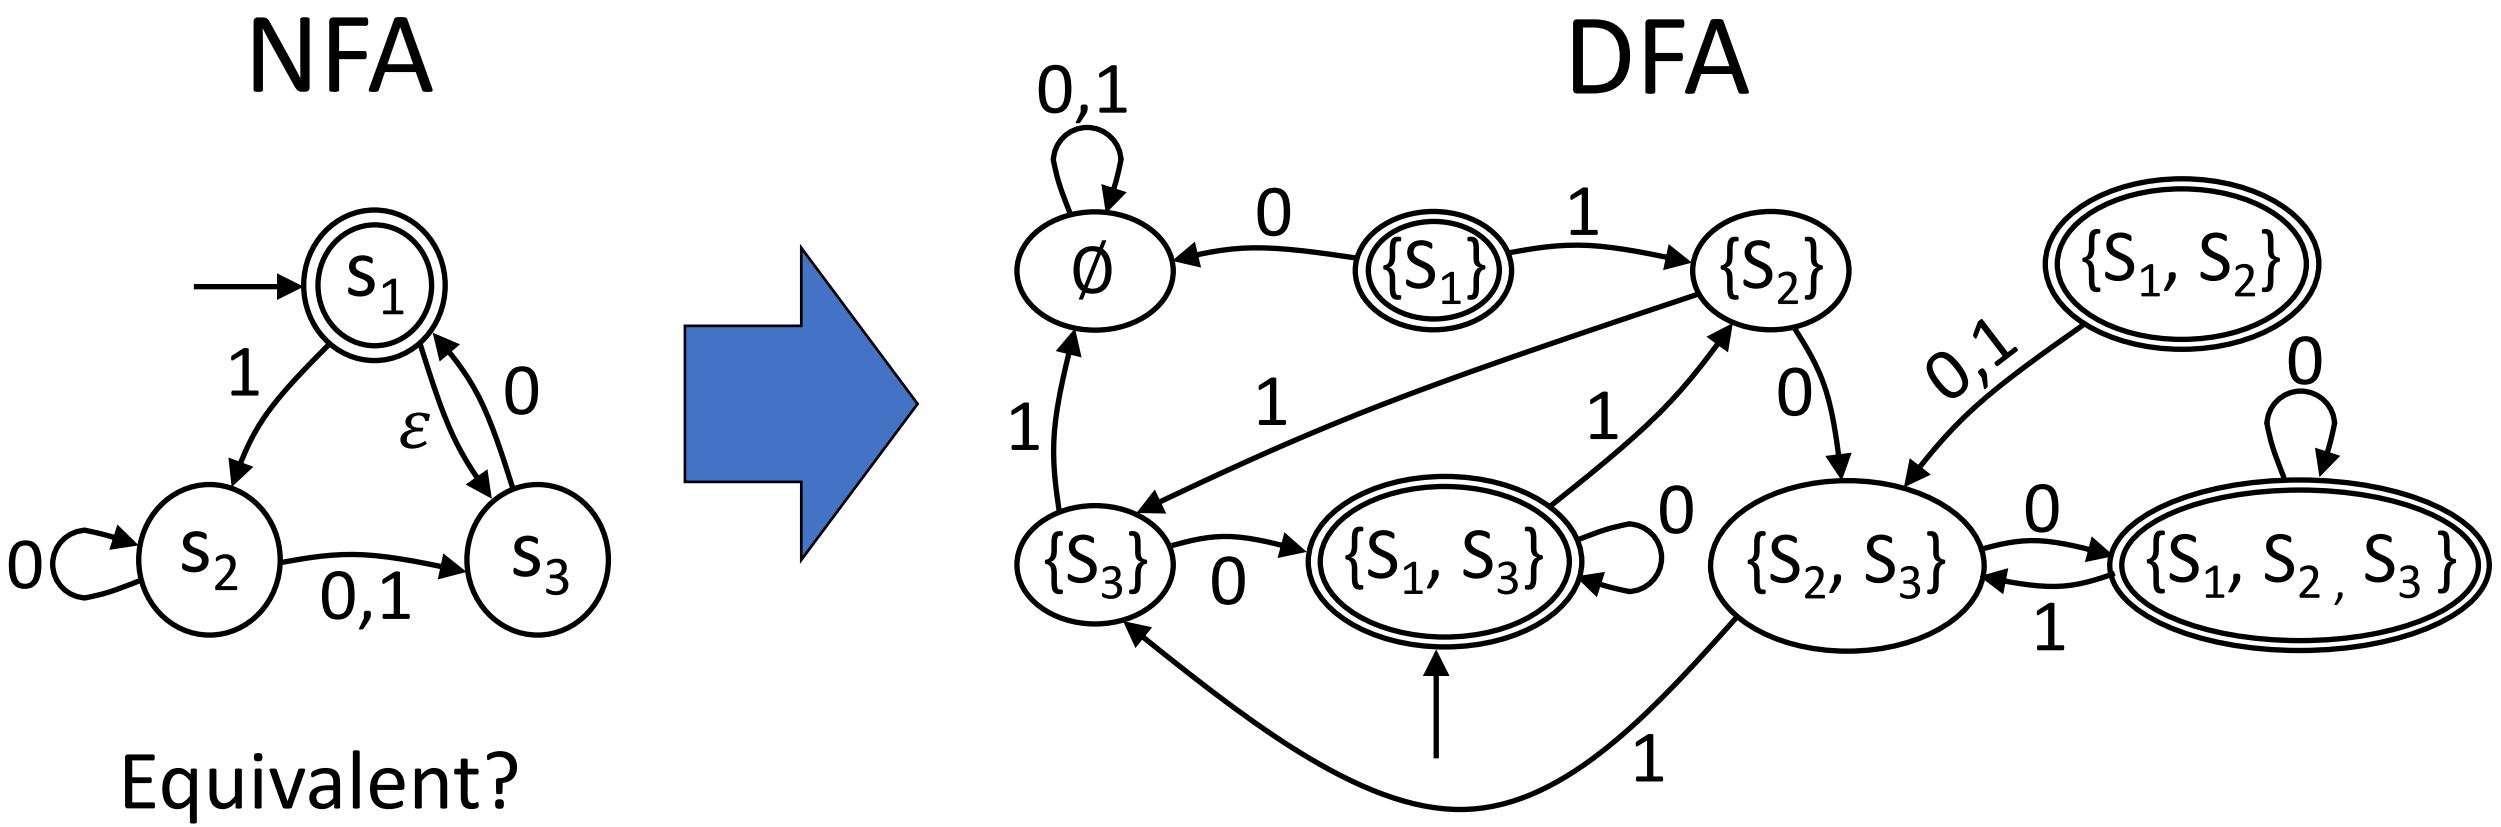
Equivalent?

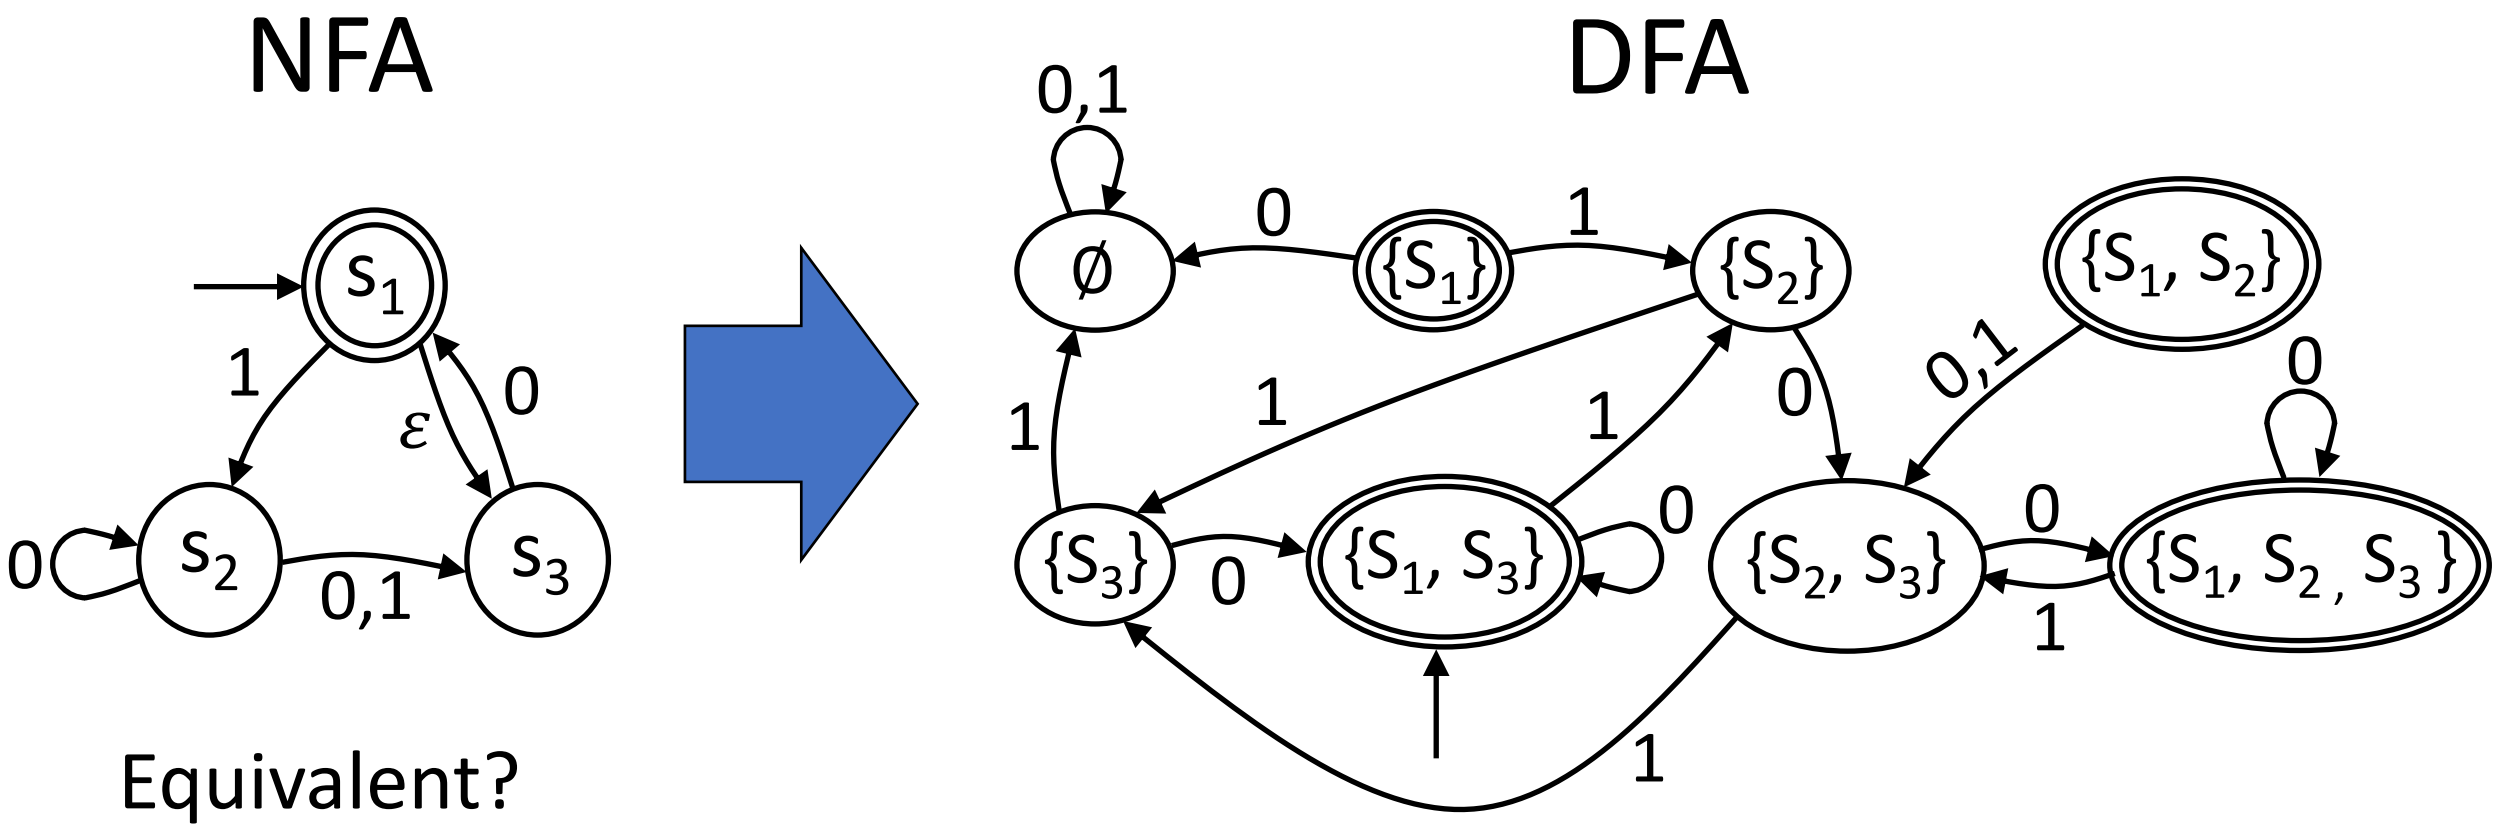
DFA vs NFA



Equivalent?

Suppose w accepted by NFA.

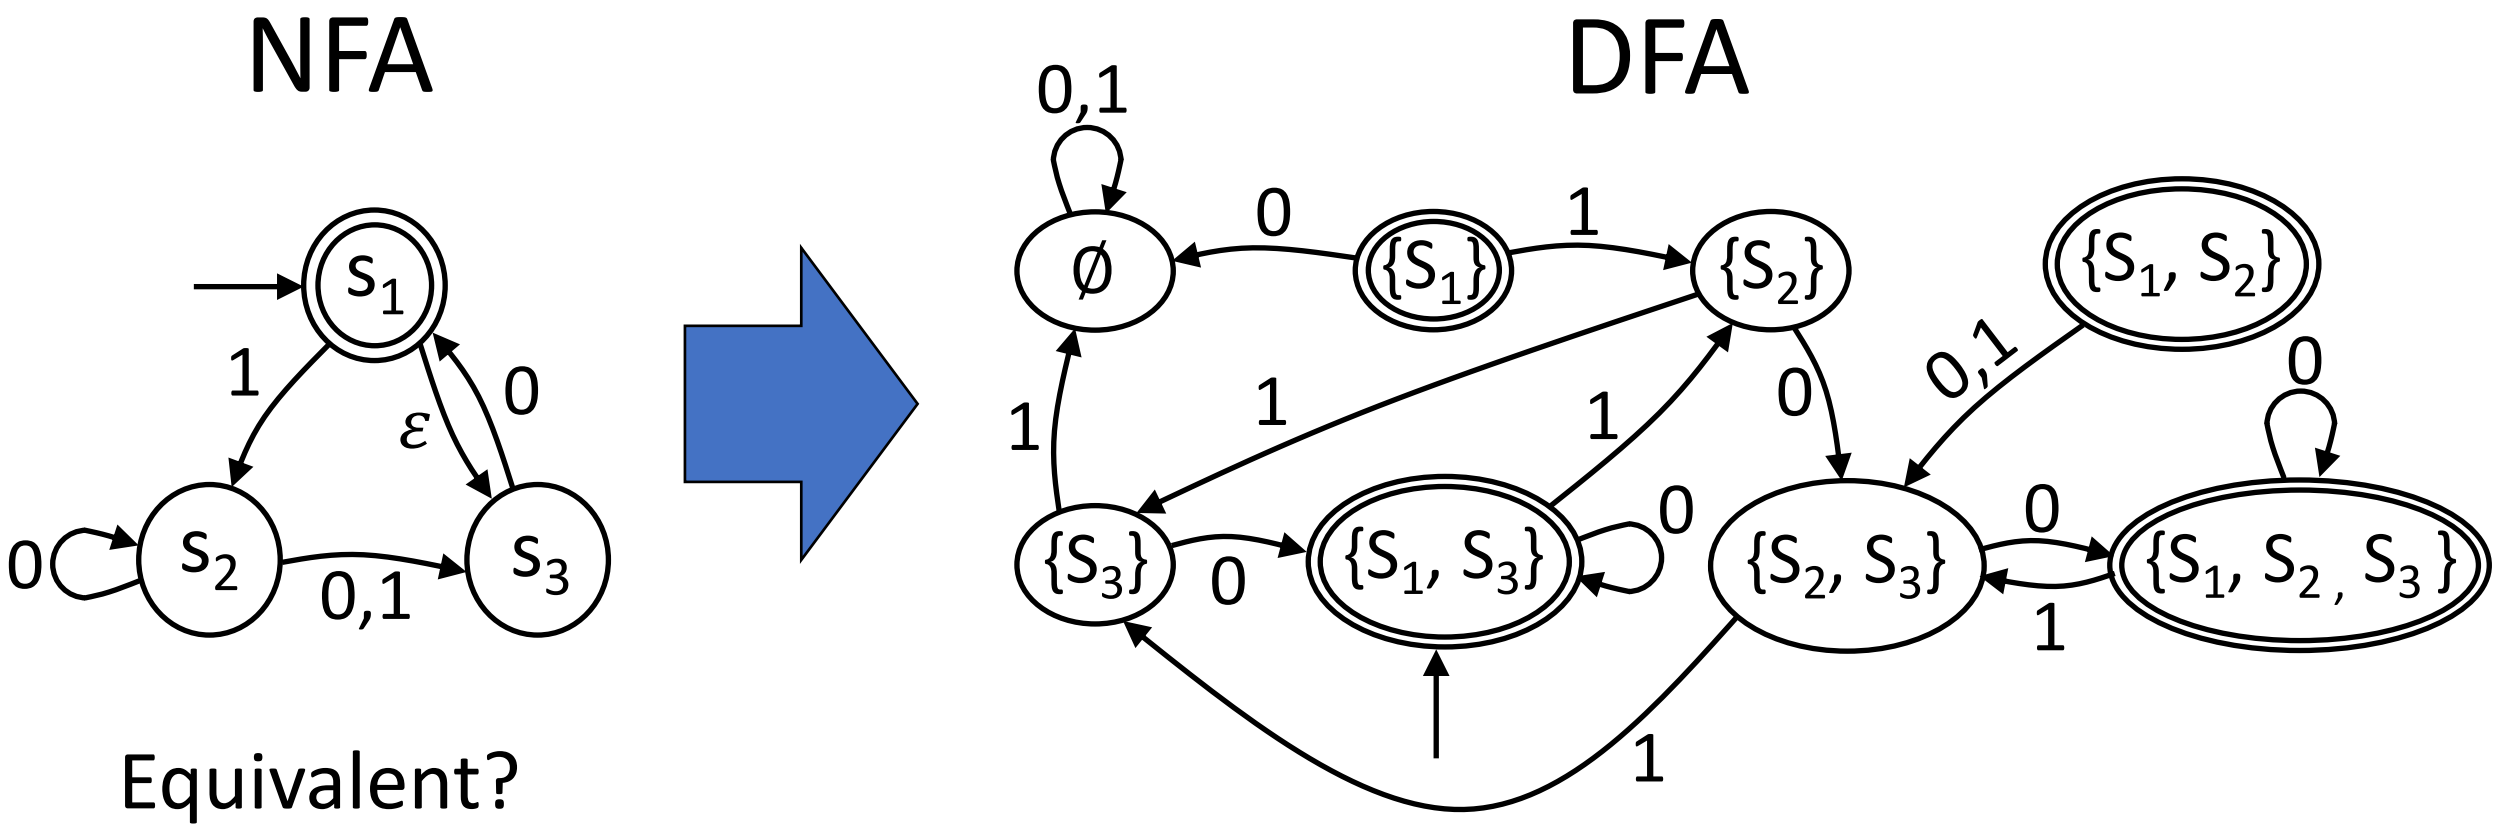
DFA vs NFA



Equivalent?

Suppose w accepted by NFA. At each step of its processing, DFA will be in state that corresponds to all possible NFA states.

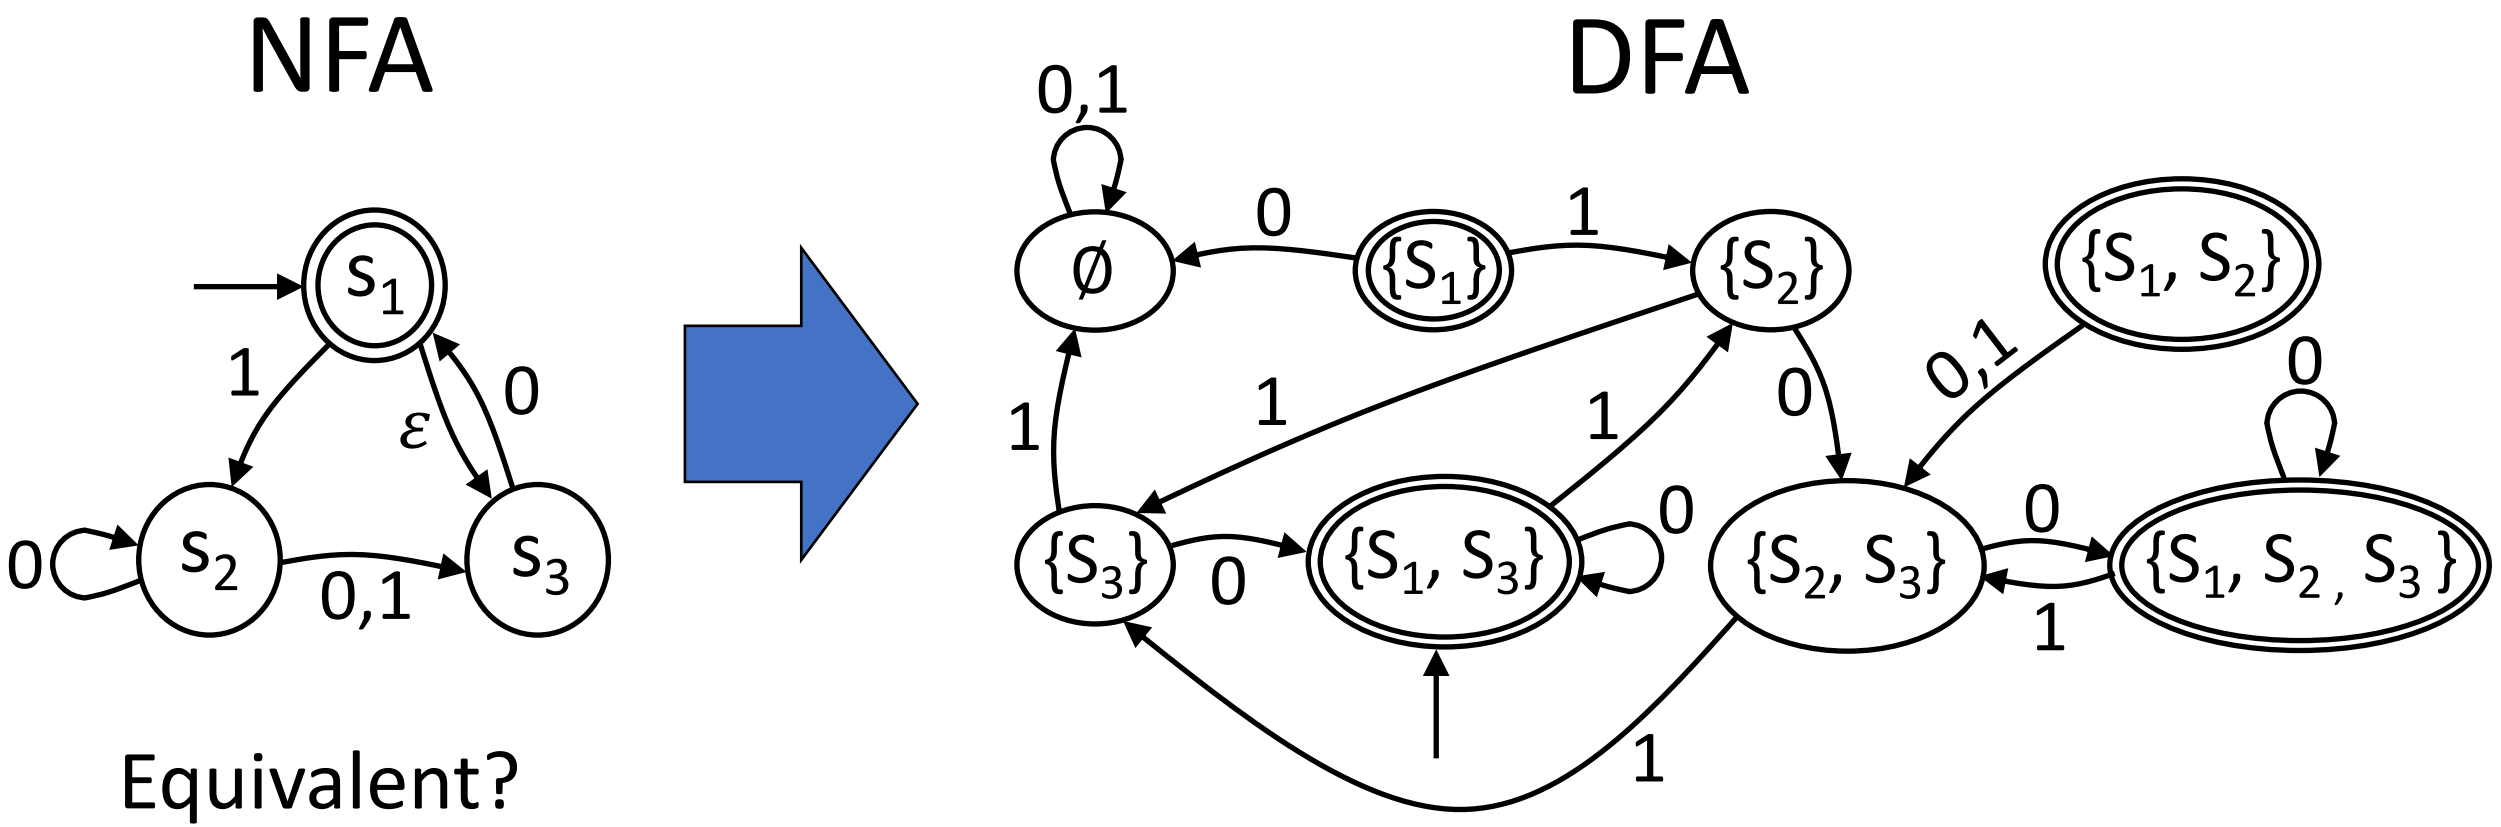
DFA vs NFA



Equivalent?

Suppose w accepted by NFA. At each step of its processing, DFA will be in state that corresponds to all possible NFA states. If NFA ends on accept state, corresponding DFA state will accept too.

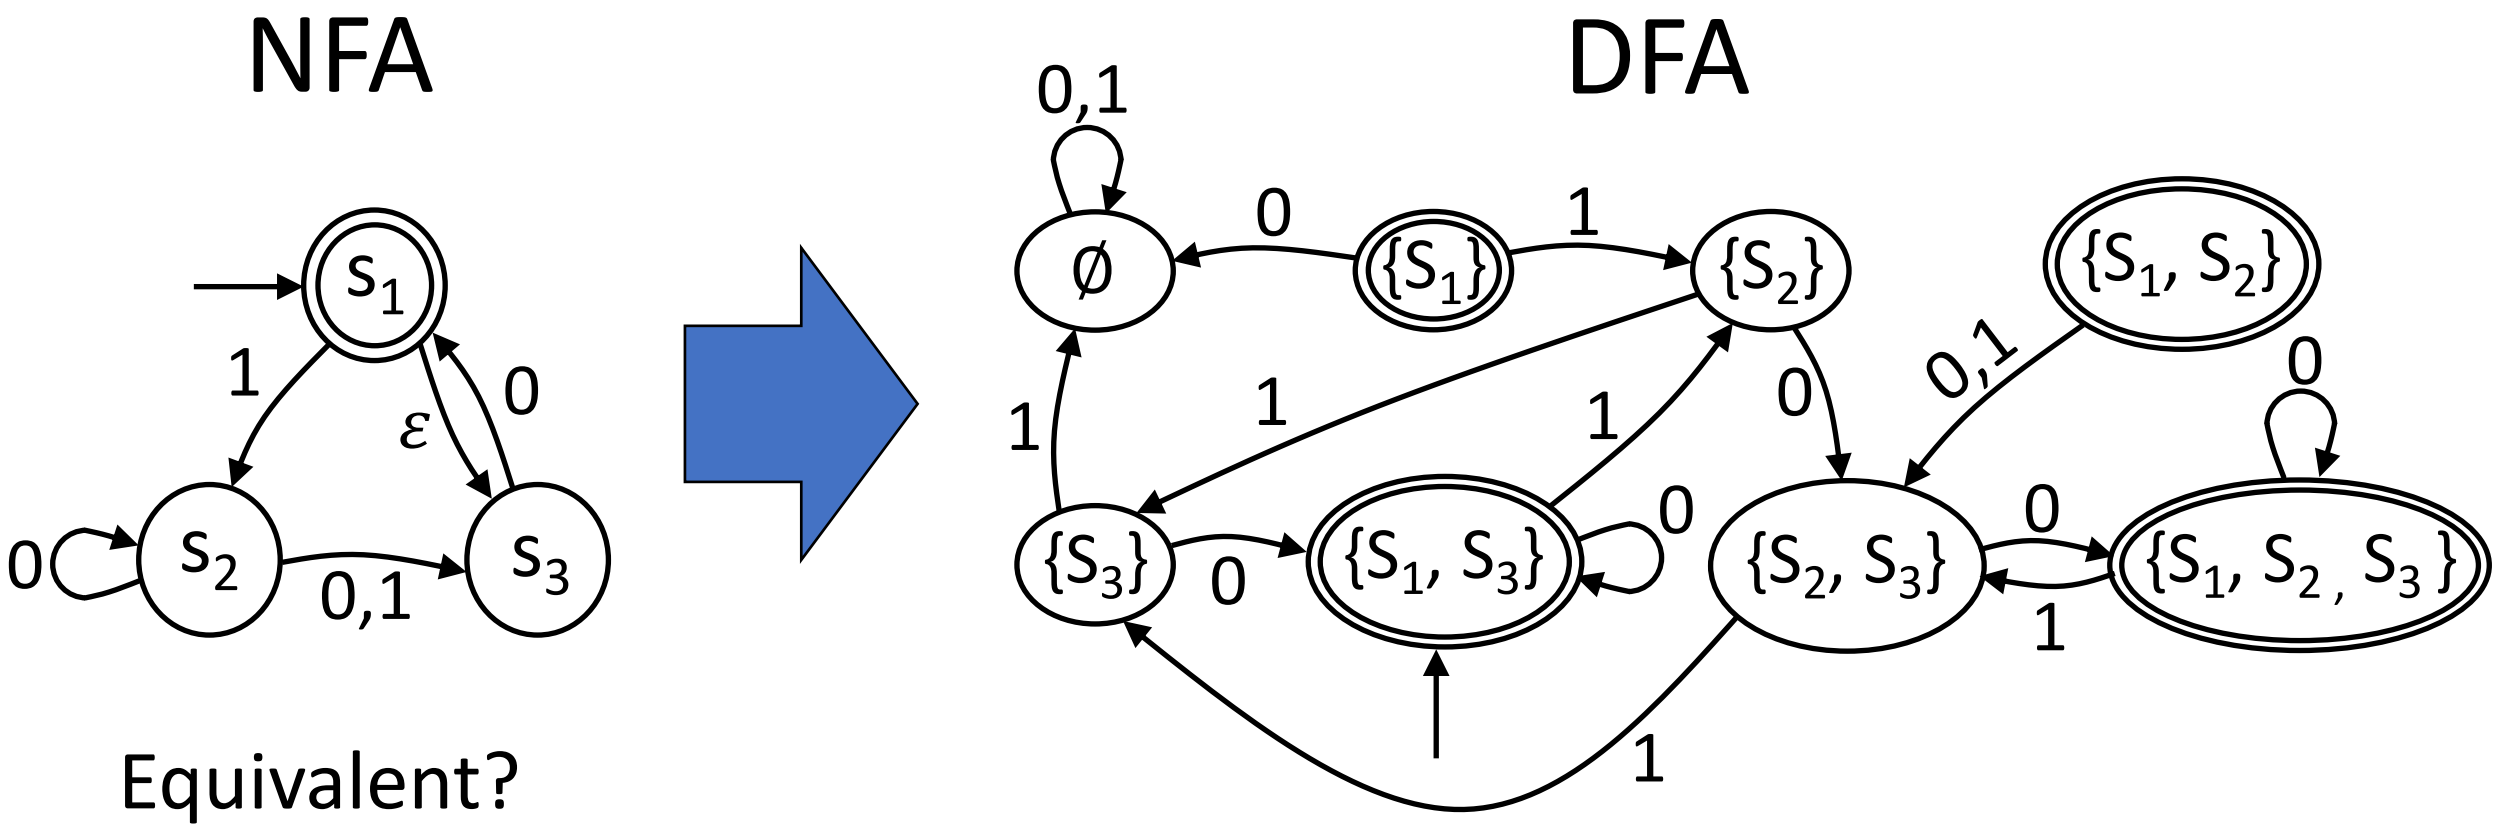
DFA vs NFA



Equivalent?

Suppose w accepted by DFA.

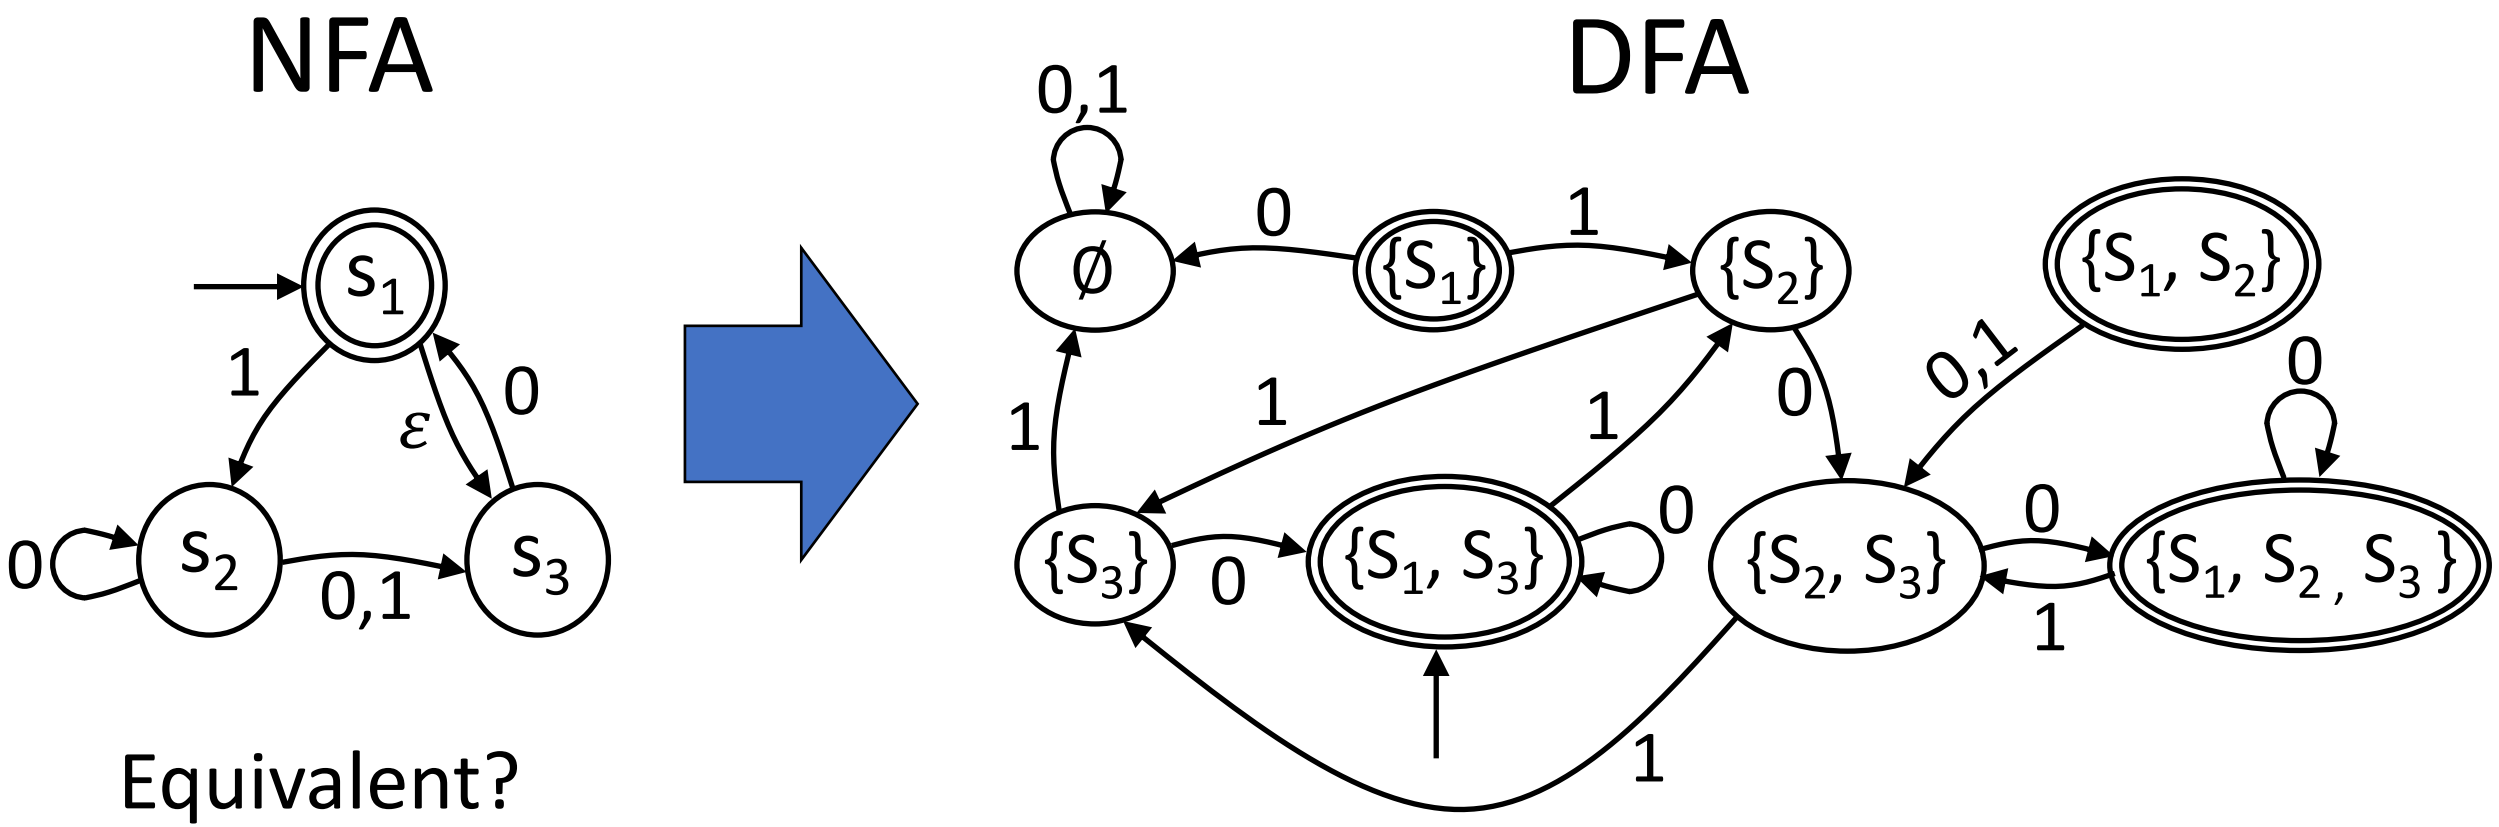
DFA vs NFA



Equivalent?

Suppose w accepted by DFA. At each step of its processing, DFA will be in state that corresponds to all possible NFA states.

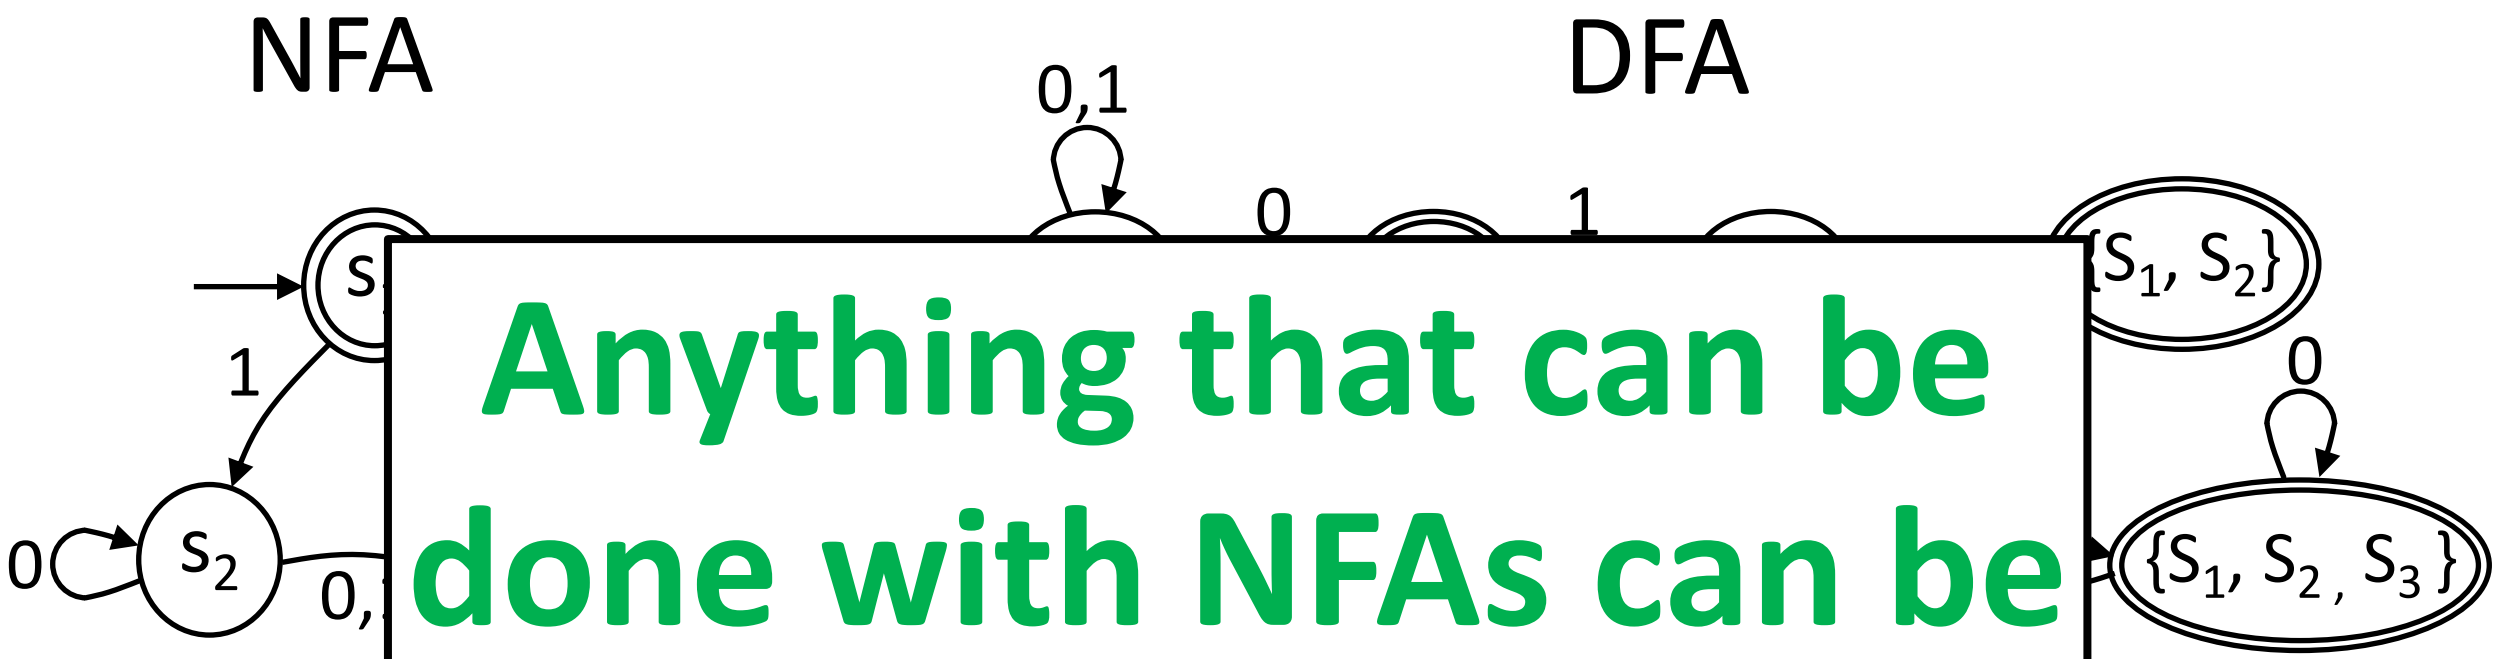
DFA vs NFA



Equivalent?

Suppose w accepted by DFA. At each step of its processing, DFA will be in state that corresponds to all possible NFA states. If DFA ends on accept state, it includes an NFA accept state.

DFA vs NFA



Anything that can be done with NFAs can be done with DFAs!

Equivale

Suppose w accepted by DFA. At each step of its processing, DFA will be in state that corresponds to all possible NFA states. If DFA ends on accept state, it includes an NFA accept state.

Definitions

A language is called a regular language if some DFA **or NFA** recognizes it.

How do you prove a language is regular?

Make a DFA **or NFA** that recognizes it.
